BOSTON UNIVERSITY STUDENTS:
COVID-19 REQUIREMENTS WHEN ARRIVING OR RETURNING TO CAMPUS
SPRING 2022

Schedule your first campus test bu.edu/healthway
All students, regardless of your vaccination status or travel history, are required to limit all interactions, except necessary trips for food, medical appointments, or COVID tests, until you receive one negative test result at BU. Testing will continue thereafter, as required.

All international travelers coming to the United States are required to have a negative COVID-19 test result no more than one day before travel to the United States.

For the current CDC travel guidelines, please see International Travel and Domestic Travel.

A positive COVID-19 test:

You must isolate—
If you test positive for COVID-19, you must isolate for 5 days. If you have no symptoms or your symptoms are resolving after 5 days, you may be cleared from isolation. Continue to wear a mask around others for 5 additional days.

bu.edu/healthway

If you have tested positive outside of BU, please submit your testing documentation via Patient Connect and isolate for 5 days.

Close contact exposure:

You may need to quarantine—
If you learn you have been in close contact with a confirmed COVID-19 case AND are experiencing symptoms, you should schedule a prioritized test at the Health Services Annex and quarantine in-place until you receive a negative result.

If you are not experiencing symptoms, please see the Close Contact Protocols on Back2BU for guidance on quarantine requirements, which depend on your vaccination and booster status.

The Massachusetts safety protocols can be found on the state’s Isolation and Quarantine Guidance website.
