Babson College
M.B.A 18'

**Ghazal
Randhawa**
India

Boston University
B.S. in Computer Eng. 20'

**Luis
Quintanilla**
Mexico

Boston University
Master of City Planning 17'

Executive Summary

How can we help seniors navigate safely and engage with their community?

Our main **goal** is to enhance mobility and confidence for the elderly and individuals with physical limitations by **connecting** them to people with similar interests and destinations, making their journeys secure and fun.

The Smart Cane Program promotes **autonomy, safety** and **community building** by helping people to navigate in cities with the assistance of artificial intelligence and DSRC technologies, as well as facilitating social encounters, new relationships and outdoor activities.

Problem Definition

**Elder population willing to go places
but vulnerable when navigating in cities...**

- Physical disabilities: motor, eyesight, hearing
- Disorientation while walking or using transit
- Fear to go out alone, insecurity
- Lack of companion

Opportunity

Elder population (65+ years old)
will grow significantly:

2 billion people worldwide by 2050*

WANTS

COMMUNITY

FREEDOM

ENGAGEMENT

Project Design

Human-Centered Product Design

- Simple, easy to use
- Various modes of use + accessories
- Voice recognition and GPS technology
- Dedicated Short Range Communications (DSRC)
- Compatible with Toyota Project Blaid®

Plus...

- An App for volunteer signups to assist Smart Cane users

Volunteers can participate by matching their daily journeys with those from users of The Smart Cane Program. They will get rewards such as frequent flyer miles, supermarket points, discounts on transportation, among other perks, from enterprises and foundations as part of their social responsibility programs.

Project Design

How does The Smart Cane Program work?

1

Start a journey telling your Smart Cane where you want to go or what you want to do

2

Your Smart Cane will walk you through with verbal directions and connect you to people with similar interests and destinations!

3

You can also meet young people* willing to assist you in your journey if you want

4

Your Smart Cane + Volunteers + DSRC will safely guide you throughout your journey!

*Volunteers may find senior citizens through The Smart Cane Program Volunteer App

Product Features

Accessories

- Earbud + mic
- Necklace

Works with existing tech

- GPS
- DSRC
- Voice recognition
- Smart Phone App

Representation of process sequence

Simple

- Single button for verbal input
- Vibration and led lights to guide users

Versatile use

- Attached to Cane
- Belt-clipped
- Wheelchair
- Walker

Target Audiences and Direct Outcomes

Primary Beneficiaries

- Senior citizens (65+ years)
- People with physical limitations
- Youth
Volunteer Reward Program

Stakeholders

- Local communities
- Municipalities
- Enterprises
Corp. Social Responsibility Programs
and Foundations

TOYOTA

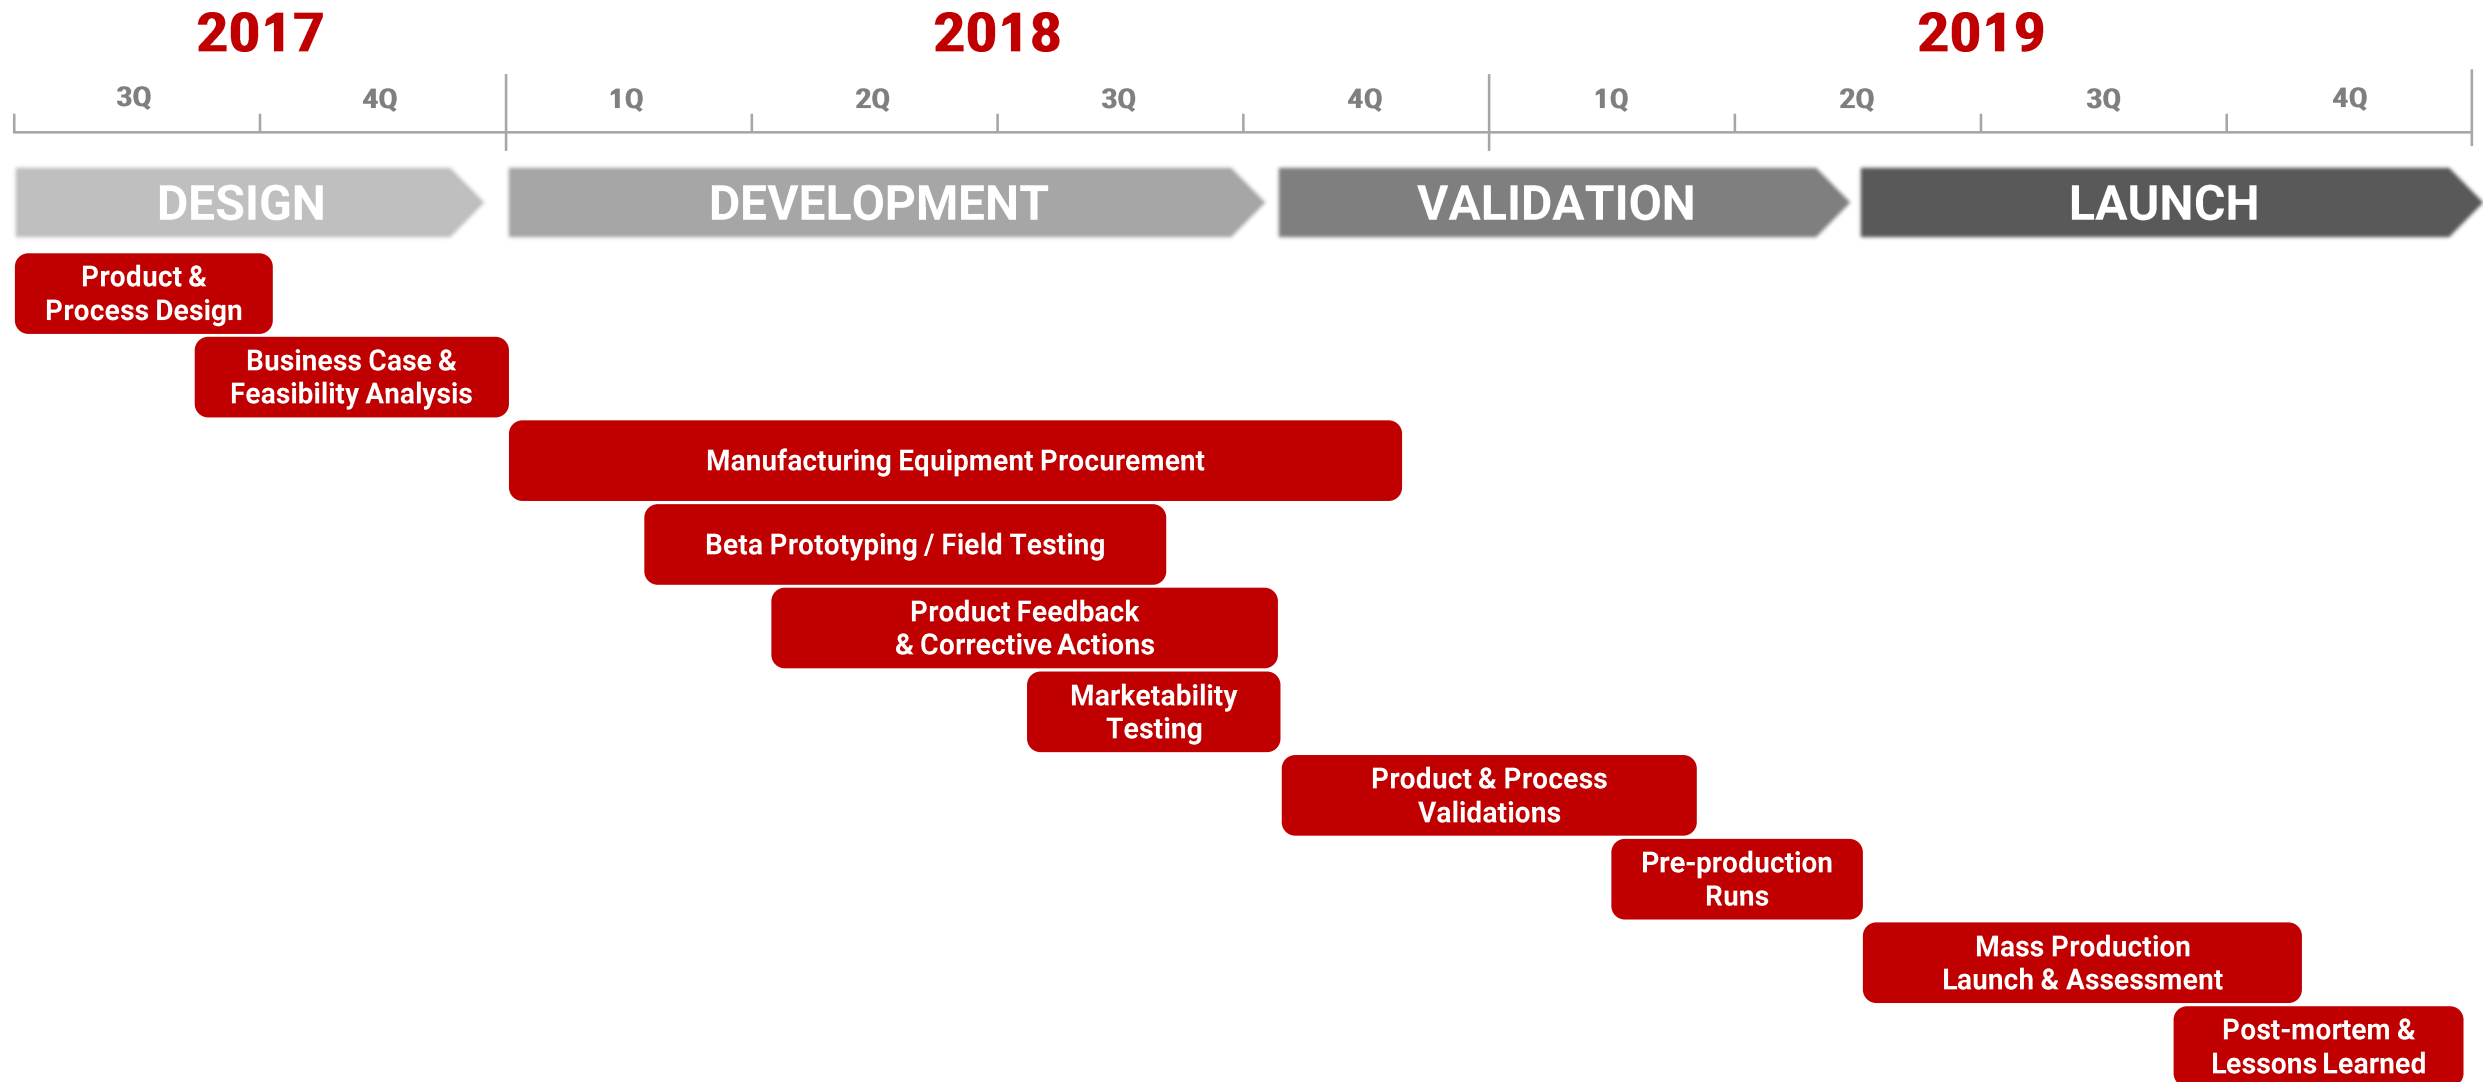

Expected Direct Outcomes

- ✓ Ability to travel **autonomously** and conveniently
- ✓ Community **engagement** through social connections via smart devices
- ✓ **Safe** journeys by means of simple directions, volunteer assistance and DSRC

The Smart Cane Program

Building **Confidence** and **Community**

Implementation Schedule

Potential Challenges

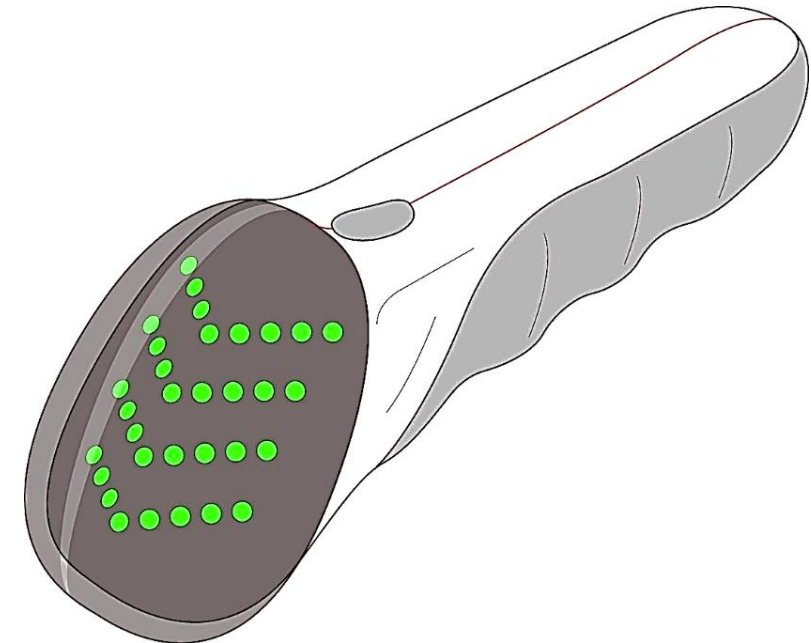

Obstacles that we foresee ...

- Development cost / Affordability. Target retail price < \$40 USD
- Aversion to technology
- Product limitations: Battery life, technology integration, robustness

We may find solutions by ...

- Drawing on existing technology / infrastructure to optimize cost
- Using Human-Centered Design to create a senior-friendly product
- Simplifying product functions to extend battery and durability

The Smart Cane Main Device

Expected Results

Short and long-term effects on society

Direct

- Provide assistance to those with mobility challenges to safely navigate cities and enjoy life while strengthening their **confidence**
- Create a process to develop profitable and affordable technologies targeted to help those with **mobility** challenges around the globe

Indirect

- Consolidate **community** ties by raising awareness on the value of taking care of those in most need

Monitoring and Evaluation

The Smart Cane Program

*Building **Confidence** and **Community***

KPI's

- Number of users (Monthly)
- Volunteer base growth (Monthly)
- Boost reward system for volunteers (Monthly)

Monitoring + Evaluation

- Automatic feedback mechanism in case of malfunctions
- Continuous improvements in hardware + software
- Qualitative feedback from users
- Data analytics to improve service and measure effects on society
