PRESS RELEASE

The Future of Software Testing : Boston University Scholarship Program

New Scholarship Program launched at Boston University

14/09/2007

Transition Consulting Limited (TCL) is delighted to announce the launch of its new scholarship program, offered to Computer Science students at Boston University.

The program takes a similar form to TCL scholarships already running successfully at universities in the UK, with students receiving their award on the results of an essay competition on topics related to software testing.

Successful applicants will receive a one-year bursary from TCL, and the opportunity of a summer internship with the company at its offices in Burlington, Massachusetts.

The faculty at Boston University includes world-renowned leaders in many central areas of computer science, and alumni of the university go on to jobs in top technology companies worldwide.

TCL has a continuing program to further strengthen its links with centres of academic excellence worldwide. These scholarships, the first to be offered by the company outside the UK, allow TCL to maintain its vision of continuing to develop the professional discipline of software testing, and to keep up-to-date with developments in education.

Professor Stan Sclaroff (BU) and Jonathan Wright (TCL) at the launch of the Boston University Scholarship program

"This is an exciting opportunity for our department.
The launch of the TCL scholarship program has generated "buzz" among students and faculty. I am impressed by TCL's innovative approach to raising awareness of modern software testing methods, offering of internships that can provide valuable training for our students, while at the same getting the word out about the TCL corporate mission. This is an excellent starting point for what we hope will be a growing and mutually-benefical partnership."

– Stan Sclaroff
Professor and Chair – Department of Computer Science

About Transition Consulting

Transition Consulting Limited is an independent Software Testing and Business Consultancy started at the beginning of 2000, with offices in the UK in London, Reading & Exeter; in the US in Burlington, Massachusetts; and in India in Bangalore.

TCL has a purpose to develop and deliver world class solutions in software testing that are Structured, Innovative and Professional. We are geared to deliver in all areas of software testing, from unit testing through to performance testing, across all markets and industry sectors.

"We seek out the brightest and the best organisations to work with in our scholarship programmes around the globe. Boston University have been amazing in how they have worked with us to set up the programme and also in seeing the potential of close involvement with TCL. I'm really pleased to be working with them."

– Stewart Noakes
Chairman TCL Group
