

## BEST Program

We're **B**roadening **E**xperience in **S**cientific **T**raining (BEST) by exposing trainees to a variety of career paths they might not have even considered. We're identifying the needs of the current and future bio-medical workforce and helping trainees match with an engaging and satisfying career.

As one of only 17 BEST schools chosen by the National Institutes of Health, Boston University is enhancing biomedical career development curricula for PhD and postdoctoral trainees in a way that explores careers both inside and outside standard academic research. We do things a bit outside the box here. At Boston University, our curriculum is informed by market needs. We work closely with industry partners to align our course of study with actual industry demands, ensuring you're trained for both jobs that are open now and future careers that might not even exist today.

BU's BEST program is open to all biomedical graduate and postdoctoral trainees at Boston University and we invite you to start finding your perfect path in BU's BEST program.
