

Research Job Connection

Connecting Researchers with Experienced Staff

- Are you a PI who is looking for temporary research staff to help with your clinical or epidemiology study timelines?
- Are you a clinical or epidemiological research professional, (Bench Scientist Research Assistant, Study Coordinator, per diem Research Nurse or Lab staff) looking for extra hours or facing a job loss due to the ending of a grant?

To meet a need for the clinical and epidemiology research community, the CTSI has created a pool of research professionals across BMC/BU. This pool consists of employees who are looking for extra hours or a new position after a grant ends, to be matched to PIs looking for study help. These are staff members who are already familiar with BMC/BU systems/policies and have proper CITI/GCP credentials.

PIs are often in need of temporary help with intensive recruitment or data collection timelines. We are here to help! The application process allows staff to apply to be part of the pool and we would then attempt to connect them to PIs who express interest or have a need.
