

Manufacturing Engineer

Lytron is a market leader and manufacturer of high-performance cooling products for use in many high-technology markets. Our continued growth has created an immediate opening for a Manufacturing Engineer to support our expansion in Japan. We are looking for a **bilingual engineer** who can work with our sales people to sell into the Japanese market. The position requires about 25% travel but is based in Woburn, MA (outside Boston). The successful engineer will verify that customer requirements are being incorporated into Lytron's manufacturing instructions.

In this highly visible position in our Engineering department you will be:

- Traveling to Japan to match customer needs with Lytron's many cooling/manufacturing technologies
- Managing integrated product teams in the design and fabrication of new products
- Preparing project schedules and conducting recurring meetings of new product teams
- Reviewing drawing packages (tolerance analysis)
- Generating and updating assembly documentation (MRP routings / process sheets)
- Processing engineering change notices (ECN's)
- Controlling manufacturing costs by employing creative manufacturing & assembly methods (fixture design)
- Developing cost estimates for new product quotations

Minimum requirements; 3+ years in manufacturing engineering. Fluent in Japanese and English. A BS degree in Mechanical Engineering. Experience with CAD, MRP Software, and ISO 9001 are also important.

Lytron offers a **competitive** base salary, a performance-based bonus and a comprehensive benefits package. Lytron is an Equal Opportunities Employer.
