

Title: Software Architect
Location: Boston, MA
Job Order#: 286307BK
Key Words: Legacy systems, Enterprise systems

Company Profile:

Our client company is a profitable and growing Internet-based software company.

Job Description:

For this senior role, our client company is seeking an individual contributor with deep expertise in SOA.

As a member of their development team you will be a major contributor to their products and services. In the position you would utilize your extensive experience in migrating a legacy system and services to an enterprise level. On a day-to-day basis you would be involved with development activities of their next generation software platform. Using the existing architecture as baseline, the Architect will work with their software directors and senior engineers in developing the next generation architecture, analyzing business use cases and system requirements. In addition, contributing to re-use/ make/buy decisions, building prototypes, models, developing components, leading integration and system test activities.

If you're a Software Architect with 10+ years of solid hands-on experience, looking for an exciting new challenge with a dynamic fast growing company – and you meet our requirements listed below – our client company could be the right place for you!

Requirements

- Experience with SOA technologies, standards, and components. Understanding of software vendor offerings in the SOA domain space and 3rd party integration. (e.g. BEA WebLogic, IBM WebSphere, JBoss; Business Rules Engines, BPEL)
- Expert in 1 or more technology platforms; exposure to 1 or more middleware platforms; knowledge of frame-works and design patterns; knowledge of system performance models.
- Experience with development of e-commerce applications involving Perl, Mason, Catalyst, Template Toolkit, Apache web servers, DBI, CGI, SQL, HTML, and relational databases (Informix, Oracle, SQL).
- Experience with financial applications, payment systems, Internationalization and Localization a plus.
- Must be comfortable working on a mid size team in a consensus
- Strong mentoring skills and experience
- BS in Computer Science degree and 10 years, or MS in Computer Science and 8 years, or equivalent experience.

Resumes should be e-mailed as a Word attachment to bk@ndt.com
