

**Title:** Software Architect

**Location:** Boston, MA

**Job Order#:** 277207BK

**Company Profile:**

Our client company is a fast-growing, private company located in Boston, MA.

**Job Description:**

The development team at our client company is looking for a software architect to lead the architecture and implementation of a new product for acquiring, transforming, and creating structure on data. They are looking for a talented engineer who enjoys working hard problems, in collaborative environments, and has experience leading the implementation of software products. Java experience isn't required, though much of the code is likely to be written in Java.

Some of the projects include:

- A multi-threaded, distributed data transformation/processing engine.
- Natural language processing modules for extracting relationships and structure from unstructured text.
- A flexible framework for crawling and acquiring content from disparate sources.

It's a great opportunity to have a significant impact at fast-growing company in an exciting space.
