

**Title:** Software Engineer

**Location:** Boston, MA

**Job Order#:** 267307MR

**Company Profile:**

Our client company's systems are among the most demanding, high-performance business systems ever built. We are assisting our client in filling several open positions for highly experienced Developers. The positions involve developing the core business logic for the system in Lisp, Python, C++ or Java. Experience coding in Lisp is helpful but not required

**Job Description:**

**Responsibilities:**

- Designing and implementing algorithms to make our search and pricing systems more capable and more efficient.
- Developing and maintaining messaging layers to reliably process real-time data feeds from legacy computing systems.
- Designing and building user interfaces for our systems, working closely with our customers to meet their needs.
- Designing and extending our XML APIs and collaborating with our customers to make the most effective use of our APIs.

**Qualifications:**

- Bachelor's degree in computer science or other technical field or equivalent work experience, plus professional programming track record.
- Experienced in implementing large, working software systems.
- Demonstrated practical design and implementation experience with some of the following technologies: web (server-side Java, DHTML, JavaScript), XML (XSLT, XML Schema, Relax NG, web services), databases (Oracle, MySQL), device drivers, compilers, or operating systems.

Resumes should be e-mailed as a Word attachment to [mr@ndt.com](mailto:mr@ndt.com)

Only e-mailed resumes will be reviewed. Those candidates with backgrounds best fitting the position will be contacted.

Your resume will not be circulated without further discussion with you.
