

S2 Security Corporation (<http://www.s2sys.com>) is a small, privately held company that is designing, building and selling physical security systems for the enterprise. Founded five years ago by industry veterans, S2Systems has become profitable this year, and continues to grow rapidly. Today there are thousands of installations of the "S2 NetBox" platform, which is a networked information appliance approach to physical security.

Senior Web UI Developer

S2 is seeking an experienced web user interface developer to join a small, fast-paced, inter-disciplinary team of engineers that is continually evolving our products. This developer must have a strong desire to create practical, useful, and innovative web user interfaces for our customers as we continue to expand the range and size of our installations. He/she must have considerable experience with all the standard web development technologies, be familiar with "Web 2.0" technologies, and enjoy continually learning and acquiring technological expertise in new areas. He/she must exhibit a high degree of organization and self-direction in figuring out and responding to customer requirements.

Requirements:

- . At least 5 years experience in web user interface development (HTML / XML, CSS, XSL, Javascript, server-side scripting solutions)
- . Skills in developing functional and usable interfaces for customers
- . Team oriented and flexible
- . Self-motivated and able to drive issues to resolution
- . Familiarity with Web 2.0 technologies (XMLHttpRequest, client-side Javascript libraries)

Bonus if you have:

- . Ability to write SQL statements and understanding of relational databases
- . Unix development experience
- . Experience with Agile development practices

S2 Security is growing too large for their current space in Wellesley, so soon they will be moving to Speen Street in Natick, MA.

Resumes for all of these opportunities should be sent to:
