

ACTION PLAN

I am working at Department of Obstetrics&Gynecology, Faculty of Medicine, Khon Kaen University, Thailand. It is the Medical school. So we have different problems from other settings. We tried to implement the WHO new ANC model at our department 2 years ago but it's fail. So I think we have to identify the real problems and try to implement it again. PSBH is very useful for me !

Problems

1. Faculties' understanding and attitude about concept of Evidence Based Medicine(EBM)
2. Faculties' knowledge and information of the WHO new ANC model.
3. The decreased number of cases may affect the teaching process.

Methodology

1. Inform authorities in the department; chairman of the department, postgraduate committee, undergraduate committee about the WHO new ANC model trial and encourage them to implement it to our department.
2. Set the workshops of EBM and WHO new ANC model for all faculties in the department and all OB&GYN residents.
3. The contents of the workshops include concepts of EBM and steps and details of the WHO new ANC model.
4. Try to push the WHO new ANC model in the curriculum.
5. To solve the problem of decreased number of cases, try to increase the number of affiliate hospitals (now we have 5 affiliate hospitals) and conduct the workshops for them.
6. If we cannot implement in the large scale, try to implement in the small scale such as some divisions in the department. (There are 5 divisions in my department)

Evaluation and monitor the practice by faculties.
