Mike Pence gets a COVID vaccine. It's the least he could do.

By Jonathan D. Glater

President Mike Pence got the first dose of the Pfizer vaccine on Tuesday, Dec. 22, 2020. He announced it via Twitter: “The media has tried to scare us by making vaccines seem dangerous but it isn’t true. It’s the least he could do.”

This is an admittance of something that only those who are vaccinated can truly experience. If you haven’t yet received the vaccine, you can’t feel the sense of relief that comes when the promise of new normality dawns. The effect is more powerful than any other vaccine.

Mike Pence, as I write this, is likely not reading this sentence. He is probably too busy making a decision about the U.S. presidential election. But what he said can be heard as an admission that the pandemic-era before the vaccine is better over.

The goal of that landmark act was to aid structure focused on providing students, has actually risen more quickly than tuition at private, non-profit schools are still cheaper). More than 14,000 dollars to cover tuition, room, and board. And the federal government sold billions of dollars worth of student debt to pay for these projects.

Our concern here is not whether student debt is fair or unfair. It is a social, not an economic, problem. It is a societal problem and one that disproportionately affects people of color. It is too easy to scold vaccine skeptics as irresponsible, but what is more pressing is to understand the different lenses through which people view the vaccine.

The mode of transmission for COVID has proven to be predominantly airborne. It’s the least he could do.

Mike Pence is a man of action. He is known for his energy and enthusiasm. He is a hard worker and a true believer. But he has also been known to oversell a policy and to make claims that are not always true. There is a danger that this could happen with the vaccine.

There is a danger that the vaccine will be oversold as a cure-all. There is a danger that people will think that the vaccine will make them invincible. There is a danger that people will think that the vaccine is a miracle. There is a danger that people will think that the vaccine will make them unvaccinated.

The key point is that the vaccine is not a cure-all. It is not a miracle. It is not a panacea. It is not a silver bullet. It is not a magic wand.

The vaccine is a tool that can be used to help us achieve our goals. It is a tool that can be used to help us protect our health and our safety. It is a tool that can be used to help us achieve our dreams.

But it is not a cure-all. It is not a miracle. It is not a panacea. It is not a silver bullet. It is not a magic wand.

The vaccine is a tool that can be used to help us achieve our goals. It is a tool that can be used to help us protect our health and our safety. It is a tool that can be used to help us achieve our dreams.

But it is not a cure-all. It is not a miracle. It is not a panacea. It is not a silver bullet. It is not a magic wand.
