The Square Kilometre Array: Science and Status Update

Tyler Bourke

SKA

The Square Kilometre Array (SKA) will be the world's largest radio telescope when Phase 1 is completed in the next decade. The past few years have seen great progress toward this goal, with construction to start in 2019 and science operations anticipated to begin in 2024. In this presentation I will provide a status update on SKA activities, with a focus on the science it will enable.

Lunch Talk in CAS 500; 1:30-2:30pm
