

**Position available: Research assistant in neuroscience lab**

New York University Medical Center

The Long lab at the NYU School of Medicine (<http://longlab.med.nyu.edu/>) is seeking a research assistant to support and participate in ongoing scientific investigations concerning the function of neural circuits and their relationship to behavior. This position is central to the operation of the laboratory, and the chosen applicant will handle both basic responsibilities (equipment purchasing, animal maintenance) as well as more advanced duties (data collection and analysis, device construction, etc.). Applicants must have a Bachelor's degree in neuroscience or a related field. Those with experience in electronics, engineering, computer science, or related technical disciplines will be given special consideration. Most importantly, the job requires a 'team player' with a sense of humor as well as technical dexterity, dedication, creativity, organization, and a genuine excitement about Neuroscience research and learning in general.

Applicants should send a CV and the names/contact information for three references to Michael Long ([mlong@med.nyu.edu](mailto:mlong@med.nyu.edu)). The starting date of this position is flexible, but would be best around June 2012. We are exclusively interested in applicants that are in a position to make at least a two year commitment.
