## **THEME 3: PUBLIC HEALTH IN THE CONTEXT OF MASS FORCED MIGRATION**

### **Team Description and Objective**

Our team will be examining the state of public health in the context of mass forced migration related to the Syrian Civil War. The war and subsequent migration patterns have disrupted the public healthcare systems at domestically and internationally. Migrant receiving countries (often referred to as host countries), such as Jordan, have taken responsibility for the majority of the burden related to caring for Syrian refugees; this includes providing health care for the population influx.
