DISSERTATION

Reading the Book of Life: Contingency and Convergence in Macroevolution (2009)

Supervisors: Alex Rosenberg / Robert Brandon

Committee: Dan McShea, Karen Neander, Owen Flanagan

Abstract. Biologists have long debated whether the shape of complex life represents the fluky culmination of an eminently unrepeatable series of contingencies, or whether there is a greater necessity to life's grand parade of forms. Gould believed that replaying the tape of life would result in a radically different macroevolutionary outcome—a morphological

menagerie bearing little resemblance to complex life as we know it. Others have argued that the evolution of animal life is highly replicable because it is significantly constrained by physical and biological laws. In this thesis, I analyze several key theoretical concepts in this debate, especially the notion of contingency as it functions in macroevolutionary theory, and I explore methodological hurdles confronting the empirical resolution of this controversy.

EVOLUTIONARY BIOLOGY MASTERS THESIS

Extinction and Reiteration in the History of Life: A Macroevolutionary Dialectic (2009)

Supervisor: V. Louise Roth

Abstract. In this thesis, I examine the macroevolutionary dialectic between the extinction of biological forms on the one hand, and their evolutionary reiteration on the other, especially the iterated evolution of robust image-forming sensory modalities including vision, echolocation, and electrolocation.

LAW SCHOOL THESIS

Science and Law in the Construction of Human Races (2002)

Supervisor: F. Michael Higginbotham

Abstract. In this thesis I explore the interaction between racist law and flawed science in perpetuating the American racial caste system in the Antebellum and post-Civil War South.
