Standing waves in optical positive photoresist films: a new approach

Babu, S.V. Barouch, E.

Clarkson Univ., Potsdam, NY, USA

ABSTRACT

A new approach to the problem of standing waves in a thin positive photoresist film is given. Explicit analytic expressions are obtained in terms of the classical WKB approximation. A self contained, convergent iteration scheme is offered for accurate determination of the fields and the concentration of the photoactive compound as functions of depth and time.
