My Visit to Boston University!

CARE center
for Autism Research Excellence
I will visit Boston University to be part of a research study! The researchers want to learn about how different people learn spoken language.
During my visit I will hang out with researchers, play games, answer questions, and participate in brain imaging while I watch my favorite movie!
Mom or Dad will answer some questions too!
During my visit I will wear a bracelet on my wrist while I do activities. The bracelet will be tight so it doesn’t slide around but it will not hurt me.
I will also wear a vest while I do activities.
Some parts of the activities I complete may be easy and some may be hard. I can try my best!
During brain imaging, I will get to wear a cool cap on my head, watch a movie and listen to sounds. The cap feels a like a swim cap and might feel tight. It might look and feel silly, but it does not hurt.
During my visit I may feel frustrated at times. If this happens, I can ask for a break or take a walk. I can ask for water and snacks too!
