Job Title

Electronic Health Record (EHR) Web Development Internship

Job Description

We are seeking two interns to work closely as part of our summer internship program.

Position #1: Focused on constructing analytical web applications with Java.  (this job description)

Position #2: Focused on data mining / machine learning of EHR data

Both roles will get in-depth exposure to the operations of a budding startup and be introduced to the major players and IT developments in healthcare. Over the next few months, you will be living the startup life: solving new problems everyday as you work to help make a young company, kicking and screaming, a leader in the area of EHR networking and data mining.

Responsibilities

• Build web applications and web services that are healthcare data-driven

• Integrate data stored in remote, varied databases

• Enable web apps to utilize predictive models

• Learn new technologies that might be helpful to the team

Salary

Paid Internship

Location

1 Cambridge Center, 5th Fl, Cambridge, MA 02142
