PRIMATE CONSERVATION

SPRING'25
T/TH
11AM-
12:15
PM

One of the most pressing global issues of our time is the negative impact of humans on wildlife and natural habitats. In this course students research the root causes of threats to primates and their habitats and the role of both the individual and the community in protecting nature. Using project-based learning, students will learn how a broad range of inter-disciplinary and innovative approaches have been applied to primate conservation and will learn how to use video and photographic images to create impactful primate conservation messages.

with Professor Cheryl Knott
