

# SPEECH AND LANGUAGE SERVICES FOR BILINGUAL APHASIA CLIENTS

Boston University- Aphasia Research Laboratory

DO YOU HAVE CLIENTS WHO SPEAK:

SPANISH-ENGLISH

AND WOULD BENEFIT FROM MORE SERVICES?

The Aphasia Research Laboratory at Boston University is conducting research to determine the effectiveness of language therapy for bilingual individuals with word finding, sentence formulation, sentence comprehension, reading and writing problems.

We are interested in studying the effect of providing therapy in one language that may influence the other language

Treatment can range from 2-5 months at no cost to the client and can be completed over video-conferencing for subjects who are unable to make it to Boston University.

## Who Qualifies?

Post-stroke bilingual individuals with difficulties communicating in one or both languages

## How do they begin?

Contact us and let us know about your clients or have them contact our bilingual staff directly
