

MY EEG AT CARE!

We want to see what happens in
your brain when you listen to
sounds!

First, we will measure your head.

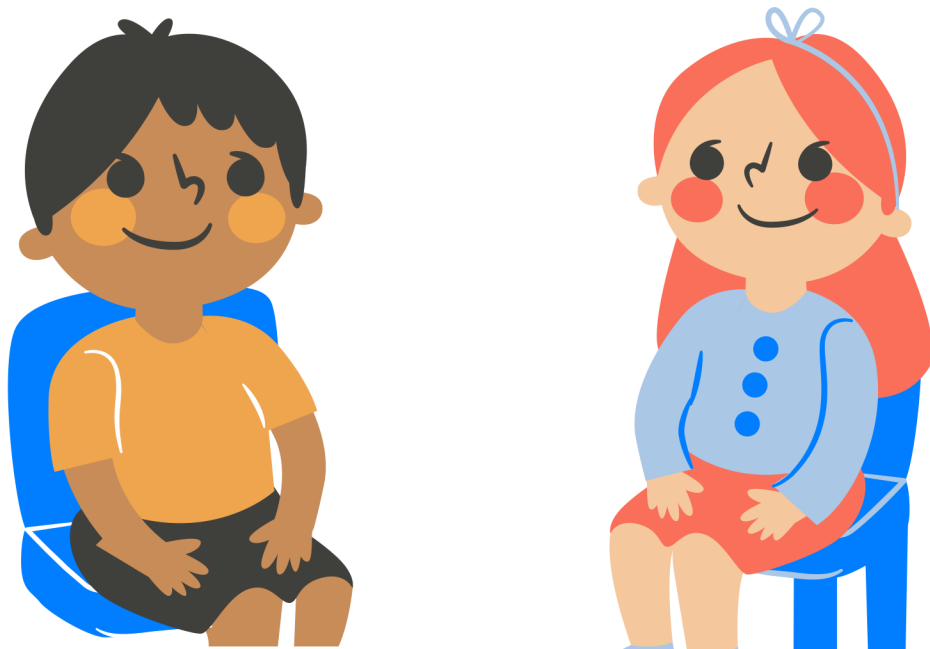

Then, you will
walk inside our
EEG room.

You will sit in our
big blue chair.

Sit **quietly** and **calmly** in the big blue chair.

We will measure your head and make
a mark on your head.

Then, we will put a special hat on your head!

The hat might feel cold and wet, but it does not hurt.

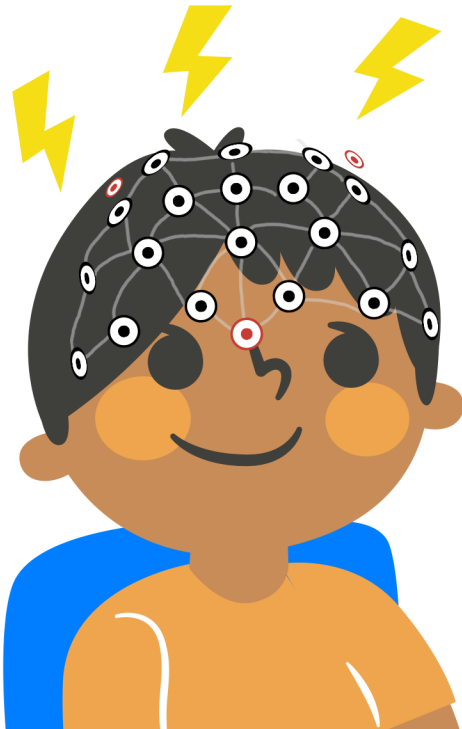

Tell us if you feel uncomfy and we will fix the hat!

These kids are wearing the hat!

How do they look?

The hat has special wires that send
electricity from your brain to our
computer!

You can watch the iPad while we are
putting on the hat.

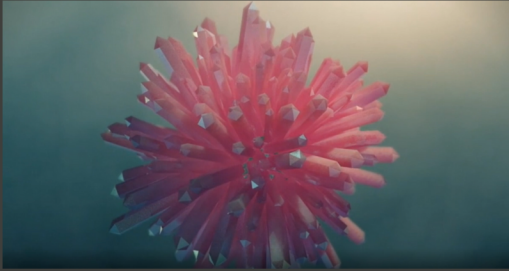

Keep your hands and
body **calm** and **quiet**
when the hat is on
your head.

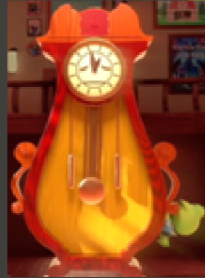

What does a calm and quiet body look like?

Next, we will turn off the lights and you will watch 2 videos.

1

2

Do your best to sit still and watch quietly!

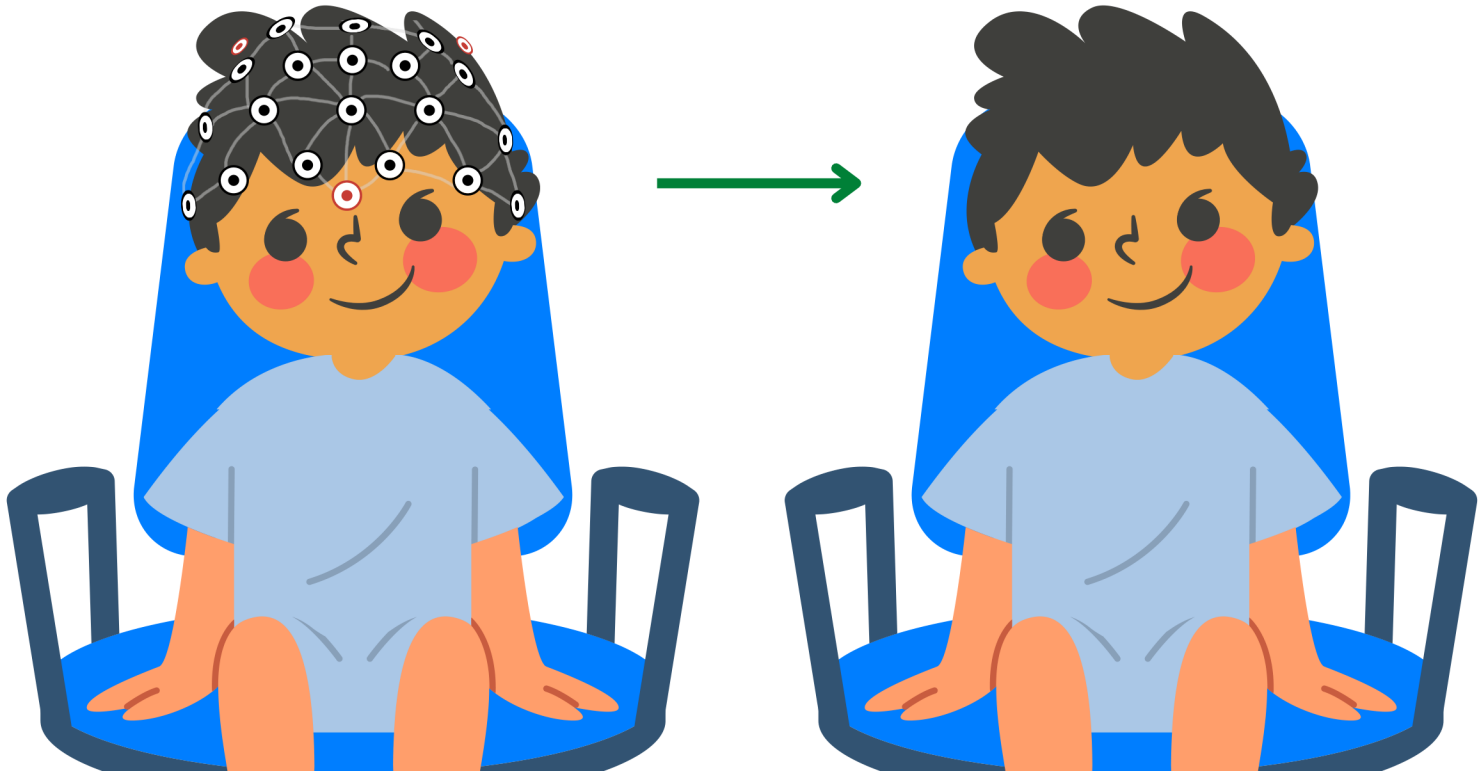

Then, take a break while
we fix your hat!

Next, watch your favorite video
on the iPad while you listen to
2 sets of sounds!

Last, we **take off** the hat!

ALL DONE!

You get a prize for all your hard work!
