

10th Asian Alumni Festival Breaks Records

in rehabilitation settings. She was the director of the physical therapy program at the University of Minnesota Medical School, where she worked for 23 years, and was a director and a past president of the American Aging Association.

She says she wants to connect her research into muscles to the ongoing investigations into treatments for spinal cord injuries and other conditions. “What happens to muscles under different conditions, which could be disease, aging, inactivity, bed rest, or spinal cord injury, is poorly understood,” Thompson says. “I am really interested in determining what causes muscle atrophy, which is a serious complication following many chronic diseases such as spinal cord injury, and understanding the multitude of processes involved will help maintain muscle to be ready for different cures for spinal cord injury and different chronic diseases.”

The professorship solidifies a partnership between the University and the Travis Roy Foundation, which funds spinal cord injury research and makes quality-of-life grants to those with spinal cord injuries. The gift establishing the professorship also provides the foundation with office space and staffing assistance over the next 10 years, as well as outreach support for the shared objectives of the University and the foundation.

Roy told the audience at last year’s gala that his foundation’s work motivates him to press for continued progress on spinal cord injuries.

“Whenever that cure does come, we’ll have our fingerprints on it, and that is pretty neat to be able to say,” he said. “And it has given my life a lot of value and meaning, and I’m proud of it. And it’s a really good thing.”

Event celebrates University’s strong global networks

It was the biggest 2016 alumni gathering outside the United States.

Last October, more than 250 BU alums and friends from 15 countries gathered in Seoul, South Korea, to renew friendships and connections and reaffirm their mutual interest in the University. Thanks to the planning of the BU Alumni Association of Korea (BUAAK), led by Young-Chun Cho (Questrom’80,’86), the event celebrated 10 years of active collaboration among alumni in the region. The festival is held every other year, alternating with the Asian Business Forum.

Guests included President Robert A. Brown and members of BU’s International Advisory Board and of the International Questrom Dean’s Advisory Board. They joined alumni and friends at a gala dinner for 150 at Top Cloud restaurant, which overlooks Seoul from a height of 32 stories.

The centerpiece of the event was the day-long festival, held on Gavit Island in the Han River. A series of presentations and cultural and social activities focused on BU’s strong presence in Asia, highlighting the many accomplishments and growing influence

of alumni throughout the continent.

Those attending also celebrated the news that 64 BUAAK members have joined to make a gift to support the transformation of the BU Castle into the Dahod Family Alumni Center (see page 18); the restored gallery of the center will be named in the group’s honor.

BU extended special thanks to Cho and to members of his festival planning team: Jed Barron (Questrom’96), Sang Gi Byeon (CAS’01), Jisung Chun (Questrom’06), Jung Woo Park (SHA’15), and Sungho Yoo (Questrom’99).
