

Data Structures with Java

MET CS 342 SB1

Course Format - On Campus

Summer 2 2019

Vic Berry

vberry@bu.edu

Office hours: by appointment or after class

Class Time: Monday, Wednesday - 6:00 p.m. – 9:30 p.m.

Class Location: **HAR 310**

Course Description

This course is designed to familiarize and instruct students in the concepts of data structures, data abstraction, information hiding, and software interaction, as utilized in software engineering. The course will describe the concepts listed above and will demonstrate their usage in modern software engineering, with Java. An emphasis is placed on the implementation of these techniques and the management of their usage.

Class Format and Grading Policy Policies

New material will be presented in bi-weekly lectures. Reviews, exercises, and homework solutions will be covered during lectures. Student participation is highly recommended, although not mandatory, and it is possible for participation to lead to extra credit.

Weekly Homework problems will be assigned, in addition to 2 programming assignments. Homework will be assigned weekly and is due the following week. Late homework and programs will not be accepted unless permission by the instructor was granted prior to the due date. A mid-term and final exam will be completed in class, and the breakdown of grading for the course is as follows:

Homework: 20% (1 Assignment per week)
Programming Assignments: 30% (4 per course)
Mid-term Exam: 20%
Final Exam: 30%

This course is an intensive analysis of Software Engineering “tools”. The student should be prepared to spend sufficient time and energy on this course to allow for successful completion of the course work.

Cheating and Plagiarism are covered by the policies of Boston University. Work handed in by students should be of that student's design. Discussion of approach to problems with other students is encouraged, but the actual work on a project should be of an individual nature

The intent of this course is to allow the student to learn to build data structures, under no circumstances should already existing data structures be used in any assignments. Use of packages such as ArrayList, HashMap, etc. will result in failure of assignments.

Academic Conduct Code – Work handed in by students should be of that student's design. Discussion of approach to problems with other students is encouraged, but the actual work on a project should be of an individual nature. Cheating and plagiarism will not be tolerated in any Metropolitan College course. They will result in no credit for the assignment or examination and may lead to disciplinary actions. Please take the time to review the Student Academic Conduct Code:

http://www.bu.edu/met/metropolitan_college_people/student/resources/conduct/code.html.

Class Meetings, Lectures & Assignments

Lectures, Readings, and Assignments subject to change, and will be announced in class as applicable within a reasonable time frame.

Week	Topic	Reference
(1) 1 July 19	Introduction, Administrative Issues. Software Design, Tools (Compilers, IDEs, etc.), Runtime analysis, Big O Notation, Test and Debugging. Java Review, Methods, expressions, control flow. Classes, Packages, Parameters	Chapters 1, 2
(2) 3 July 19	Collection Classes, Linked Lists – Arrays, Methods, Static vs. Dynamic objects, Bag Abstract Data Type, Nodes, Node tools, and Linked List Tools	Chapter 3,4
(3) 8 Jul 19	Generics – Wrapper Classes, and Autoboxing. Generic Classes, Generic Nodes, Interfaces, and Iterators	Chapter 5
(4) 10 Jul 19	Stacks – Introduction, Applications, Abstract Data Types, Array Based, Linked List Based Stacks.	Chapter 6
(5) 15 July 19	Queues – Introduction, Applications Abstract Data Types. Linked Queue implementations, array-based queue implementations. Review for Midterm	Chapters 7
(6) 17 July 19	Midterm Exam	
(7) 22 July 19	Recursive Thinking - Examples, theory implementations of recursion.	Chapters 8
(8) 24 July 19	Trees – Binary Trees, Linked and Array based representations Traversals, In-Order, Pre-Order, Post Order.	Chapter 9
(9) 29 July 19	Searching – Serial searching, Binary searching, Open Address Hashing, Chained Hashing	Chapter11
(10) 31 July 19	Sorting – Quadratic Sorting Algorithms, Recursive Sorting Algorithms, Heaps	Chapter12
(11) 5 August 19	Graphs – Directed, and undirected Graphs, Dijkstra’s Shortest Path Algorithm. Review for Final.	Chapter14
(12) 7 August 19	Final Exam	

This syllabus is subject to change.
