

**Boston University Metropolitan College**  
COMPUTER SCIENCE DEPARTMENT

## **Web Mining and Graph Analytics**

### **MET CS 688 A2**

**Instructor:**

Zlatko Vasilkoski

email: [zlatko@bu.edu](mailto:zlatko@bu.edu)

Office hours: by appointment

**Class Time:** Wednesdays from 6:00pm to 8:45pm,

**Location:** Cas 222

**Semester Duration:** 01/21/2025 - 05/01/2025.

Course Dates: <https://www.bu.edu/reg/calendars/>

Course Web Site: <http://learn.bu.edu>

Student Conduct Code: <http://www.bu.edu/met/for-students/met-policies-procedures-resources/academic-conduct-code/>

### **BU Community COVID-19 Public Health Policies**

All students returning to campus will be required to be [vaccinated against COVID-19](#), and upload information about their status (including applications for a medical or religious exemption or an extension) to the [Patient Connect](#) portal. In addition to the vaccine requirement, students must follow all other safety protocols, including the [face covering policy](#), and [screening](#), [contact tracing](#), and [testing](#) requirements. At the beginning of each class, you will be asked to show a green [Healthway](#) compliance badge on your mobile device to the instructor, and wear your face mask over your mouth and nose at all times.

### **Course Description**

The Web Analytics and Mining course covers the areas of web analytics, text mining, web mining, and practical application domains. The web analytics part of the course studies the metrics of web sites, their content, user behavior, and reporting. The text mining module covers the analysis of text including content extraction, string matching, clustering, classification, and recommendation systems. The web mining module studies how web crawlers process and index the content of web sites, how search works, and how results are ranked. In addition, certain aspects of cloud computing will be illustrated, through an introduction to

Internet of Things (IoT) analytics. Application areas in mining the social web and game metrics will be also investigated. Over the last few years, great advances have been made in the field of Natural Language Processing (NLP) and we will have an overview of the latest Large Language Models (LLM).

Please note that this is a laboratory course in which in-class use of computers is required. The class is not scheduled in a lab with computers thus laptops are required. Also note that substantial programming experience with R is needed for this course. Some of the assignments involve creation of Shiny/Streamlit web apps that you may run on mobile devices and data analytics involving optimization of neural networks. In addition, the latest MLAI & NLP tools are available in Python so some experience with it would be very helpful.

### **Required Course Prerequisites**

CS544 (Foundations of Analytics) or CS555 (Data Analysis and Visualization).

### **Course Grading Policy**

100–93.00	A
92.99–90.00	A–
89.99–87.00	B+
86.99–83.00	B
82.99–80.00	B–
79.99–77.00	C+
76.99–73.00	C
72.99–70.00	C–
69.99–60.00	D
Below 60.00	F

The course grade will be based on active class participation and quizzes/tests/lab projects (40%), midterm exam (30%), and a term project (30%). Assignments are expected to be submitted by their respective due dates. Late submissions carry a penalty.

### **Course Topics**

#### **Web Analytics**

- Metrics
- Key performance indicators
- Identifying important pages and web site visibility

#### **Web Analytics, Visualization and Statistics**

- Using Machine Learning for Web Analytics

- Dimensions and Segmentation
- Flow visualization, navigating reports.
- IoT (Internet of Things)

### **Text Mining**

- Preprocessing and content extraction
- Searching and fuzzy string matching
- Clustering text
- Classification, categorization, and tagging.
- Question answering systems.

### **Natural Language Processing (NLP)**

- Text Summarization, Q&A, Recommendations etc.
- Neural Nets & DL
- NLP & LLMs
- Text Embedding and Indexing

### **Web Mining**

- Web Crawlers, Indexing
- Searching, precision and recall
- Ranking

### **Applications – NLP Projects**

- Information extraction
- Document Classification
- Text Summarization
- Sentiment analysis
- Question and Answering systems

### **Applications - Neural Networks, Text Embedding, Case studies**

- Basics of Neural Networks
- BERT, Transformers, LLM
- AI applications
