

Information Structures with Python

CS 521S C1

Summer 2025, PSY B55

Tuesday 6:00 pm – 9:30pm

Jie Lu

jjelu@bu.edu

Course Description

This course presents an effective approach to learn Python. With extensive use of graphical illustrations, it will build understanding of Python and its capabilities by learning through examples and analogies. These examples will derive from real word applications to enhance critical thinking skills. The class will involve active student participation, discussions, and programming exercises. This approach will help build a strong foundation in Python programming that can be used effectively in real-job situations and will provide a foundation for future courses. Prerequisite: Programming experience in any language, or Instructor's consent.

Books

The Practice of Computing Using Python, 3rd Edition
by William Punch and Richard Enbody

Publisher: Pearson

ISBN10: 0134379764

ISBN13: 9780134379760

This book can be purchased from Barnes and Noble at Boston University.

Courseware

The course Web page is hosted on Blackboard Learn

https://learn.bu.edu/ultra/courses/_182904_1/cl/outline

The class notes, homework assignments, quizzes, and additional announcements will be posted here.

Class Policies

- 1) **Attendance & Absences** – Class attendance is required. Individual student is responsible for all scheduling and other announcements made in class. The likelihood of failing the course is subsequently increased if one fails to attend class regularly. The format of this course will be lectures, which will include working through sample problems. Certain course material will only appear during lectures, and most announcements will only be made in class.
- 2) **Assignments, quizzes, and project** – Blackboard Learn will be used for assignments, quizzes and project submission.
It is important to practice with more coding when learning a programming language. There will be 5 assignments. Most assignments will consist of programming problems. Each assignment is due on the specified due date. 20% of the full score will be deducted from the assignment grade for each day that it is late. The submission will not be accepted after 5 days after the due date, and grade of 0 will be assigned.
There will be 5 quizzes, which will be conducted online via Blackboard Learn. You will have 5 days windows to take each of the quizzes. But each quiz must be completed in 60 minutes. All quizzes are closed book test. You are not allowed to use any Python interpreter, either.
There will be 1 course project, which is open ended, and the topic can be chosen by students. In this project, students will frame and solve problems using quantitative capabilities of Python. Students will present their projects in the final week of the course.
- 3) **Academic Conduct Code** – Cheating and plagiarism will not be tolerated. They will result in no credit for the assignment or examination and may lead to disciplinary actions. Please take the time to review the Student Academic Conduct Code:
<https://www.bu.edu/academics/policies/academic-conduct-code/>

NOTE: [This should not be understood as a discouragement for discussing the material or your approach to a problem with other students in the class. On the contrary – you may share your thoughts, questions and solutions. Naturally, if you choose to work in a group, you will be expected to come up with more than one and highly original solutions rather than the same mistakes.]

Grading Criteria

Attendance	5%
Assignments	35%
Quizzes	15%
Project	20%
Final Exam	25%

Your final source letter grade will be determined as follows

Overall Score	Letter Grade
94 – 100	A
90 – 93.99	A-
87 – 89.99	B+
84 – 86.99	B
80 – 83.99	B-
77 – 79.99	C+
70 – 76.99	C
0 – 69.99	F

Class Meetings, Lectures & Assignments

Lectures, Readings, and Assignments subject to change, and will be announced in class as applicable within a reasonable time frame.

Date	Topic	Reading	Due
05/20	Introduction to computing and problem solving, Python programming environment, Python IDEs, modules, input/output, running Python, core data types, simple expressions.	Chapter 1, Appendix A	06/02 Assignment 1 Quiz 1
05/27			
06/03	Variables, expressions, operators and Boolean expressions, control flows, iterations, mutability, name binding.	Chapter 2, 3	06/16 Assignment 2 Quiz 2
06/10			
06/17	Strings, file processing, collections, lists,	Chapter 4, 6, 7	06/30 Assignment 3 Quiz 3
06/24			
07/01	tuples, sets, dictionaries, searching and sorting, advanced data structures, functions, parameter passing.	Chapter 7, 9	07/14 Assignment 4 Quiz 4
07/08			
07/15	Exception handling, recursion, objects and classes, attributes, methods, data encapsulation.	Chapter 5, 8, 11	07/28 Assignment 5 Quiz 5
07/22			
07/29	Abstract classes, inheritance and polymorphism, iterator and generator.	Chapter 12, 13	7/31 Project

08/05	Final Exam		
-------	------------	--	--

Programming Environment

We will be mostly using IDLE (which comes with Python installation) and Visual Studio Code for demo in class. Although, you may choose to use any other IDE (Integrated Development Environment), such as, Spyder, PyCharm and etc. We have Spyder IDE and Anaconda Python Distribution installed in our virtual lab. You may access the MET VLab from <https://www.bu.edu/metit/services/client-technology/virtual-lab/>.
