

# The Risks of Multiple Breadbasket Failure

**Anthony Janetos**

*Director, The Frederick S. Pardee Center for the Study of the Longer-Range Future at Boston University*

We are headed into a world where the risks from climate change of failure of agricultural productivity in the world's major breadbaskets cannot be ignored. I discuss both a modeling study to illustrate how those risks may occur, and their consequences, and a broader research strategy of modeling and observation that can provide practical examples for moving forward in a rapidly changing world.

4:00pm in CAS 502. Refreshments served at 3:45pm in CAS 500.
