

Immediate Opening

Post-Doctoral Clinical Research Fellow in Aging and Dementia

**Boston University Alzheimer's Disease Research Center (ADRC)
Boston University Chronic Traumatic Encephalopathy (CTE) Center
Framingham Heart Study
Boston University Chobanian & Avedisian School of Medicine**

This is an exciting opportunity to conduct high-impact studies on chronic traumatic encephalopathy, Alzheimer's disease, and related dementias at an NIA Funded ADRC. You will receive multidisciplinary training with joint supervision by a neuropsychologist and a behavioral neurologist. Research activities include:

- Clinical-pathological correlation studies
- Clinical research interviews with families of brain donors
- Multidisciplinary diagnostic consensus conferences
- Imaging and fluid biomarker studies
- Risk factor and epidemiology studies
- Genetic studies

Trainees should have a clinical degree (PhD, MD, or equivalent) with a strong research background and desire to work in academia. Eligible MDs may also serve as UCNS Fellows in Behavioral Neurology and Neuropsychology. Eligible PhD's may participate in supervised clinical neuropsychological assessment as part of a memory disorders clinic at Boston Medical Center.
