Note: The word bank is on the following page

JUNE COGNITIVE KIT WORD SEARCH PUZZLE

WORD BANK:

BIOREPOSITORY
PROGRESSION
TREATMENT
CONSORTIUM

ENCEPHALOPATHY
OPERATIONS
ACQUISITION
PROCESSING

ASSESSMENT
MAINTENANCE
STANDARDS
GOVERNANCE

This month, the word search clues are from our featured research study:

VA's National PTSD Brain Bank: a National Resource for Research

“The National PTSD Brain Bank (NPBB) is a brain tissue **biorepository** established to support research on the causes, **progression**, and **treatment** of PTSD. It is a six-part **consortium** led by VA’s National Center for PTSD with participating sites at VA medical centers in Boston, MA; Durham, NC; Miami, FL; West Haven, CT; and White River Junction, VT along with the Uniformed Services University of Health Sciences. It is also well integrated with VA’s Boston-based brain banks that focus on Alzheimer’s disease, ALS, chronic traumatic **encephalopathy**, and other neurological disorders. This article describes the organization and **operations** of NPBB with specific attention to: tissue **acquisition**, tissue **processing**, diagnostic **assessment**, **maintenance** of a confidential data biorepository, adherence to ethical **standards**, **governance**, accomplishments to date, and future challenges. Established in 2014, NPBB has already acquired and distributed brain tissue to support research on how PTSD affects brain structure and function.”
