

Day 1: INTRODUCTION

SUMMER CHALLENGE COURSE

SMART LIGHTING

Prof. Ayse Coskun
ECE Department, PHO 336
acoskun@bu.edu

Course prepared by Prof. Tom Little

- Objectives
- Course Structure
- Module Structure
- Visual Light Communications (VLC)
- The Smart Lighting Kit
- Lab 1: Rhett Board

- To become familiar:
 - The basic electrical components, circuits, signals and tools
 - The light emitting diode (LED) technology
 - The visible light communication (VLC) technology

- To be inform about contemporary LED and lighting events
- To develop engineering communication skills

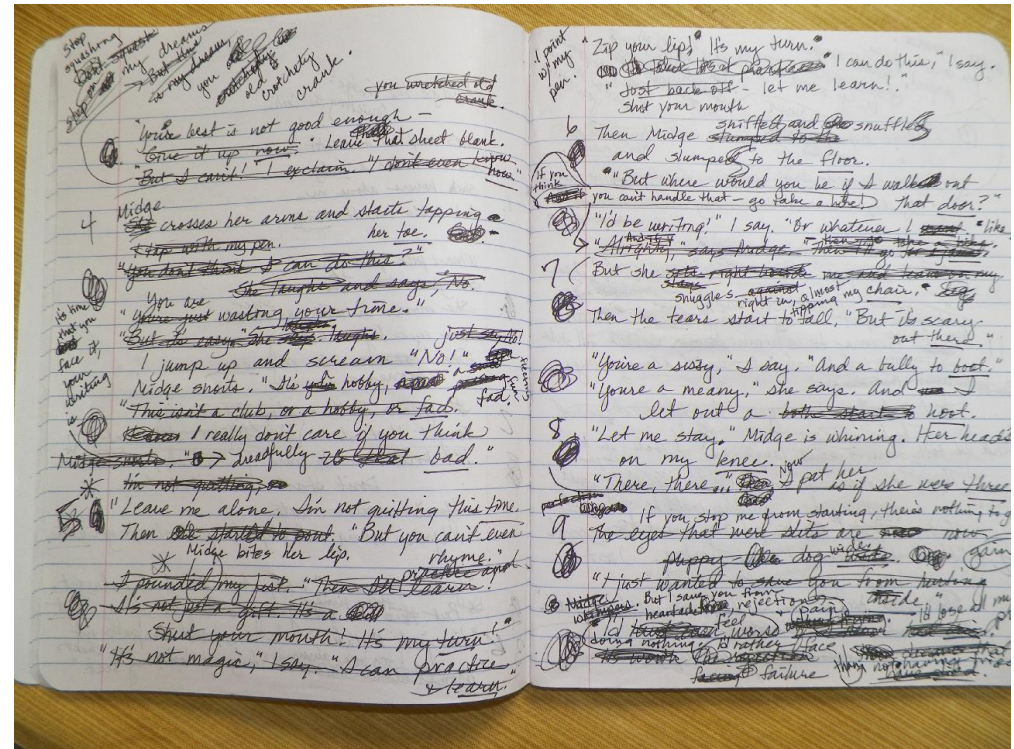

Module	Topic	Activities
0	Introduction	Lecture: Course Overview and Smart Lighting Kit
1	The Rhett Board	Operating the Rhett Board
2	Basic Circuits	Investigate the Operation of Basic Circuits
3	LEDs	LED Operation and Electrical Characterization
4	PDs and VLC Channel	PD Operation and VLC Channel Characterization
5	The VLC Link	Establishing a VLC link between the LED and PD
6	The Smart Lighting Board	Assemble and test a PCB-based VLC Transceiver
7	Analog Transmission	Investigate VLC Transmission using Analog Signals
8	Digital Transmission	Investigate VLC Transmission using Pulsed Signals
9	Heart Monitor	Acoustic Signal Detection
10	Presentations	Student Presentation and Open Discussion

Time	Activity
09:30am-09:50am	Short Presentation
09:50am-10:50am	Experiment
10:50am-11:00am	Short Break
11:00am-11:20am	Experiment
11:20am-11:30am	Finalize your Laboratory Notebook

Key entries:

- Name
- Group name
- Date of entry
- Introduce each experiment
- Sketches of laboratory setup
- Measurements
- Calculations
- Results
- Observations
- Summarize each experiment

- Fulya Kaplan (PhD student, Boston University)
fkaplan3@bu.edu
- Annie Lane (Undergraduate student, Boston University)
aelane@bu.edu

Forming Laboratory Groups:

- 2 students per group
- Group Members
- Group Name
- Introduce yourself and your group

5 minutes!

<http://smartlighting.rpi.edu>

- 10 years > \$18M from National Science Foundation

Core Academic Members

Rensselaer

<http://www.bu.edu/smartlighting>

- Boston University role: Communications and networking

Outreach Universities

Department of Electrical & Computer Engineering

Engineered light for:

Energy Efficiency

Health

Data Access

Department of Electrical & Computer Engineering

First Wave

**Common 60W
Incandescent Bulb**

uses 60W per bulb
for 800 lumens

1 bulb lasts 1,200 hrs

20 years = 21 bulbs

**Common 14W
CFL Bulb**

uses 14W per bulb
for 800 lumens

1 bulb lasts 10,000 hrs

20 years = 3 CFL bulbs

**Philips 12.5W
AmbientLED Bulb**

uses 12.5W per bulb
for 800 lumens

1 bulb lasts 25,000 hrs

20 years = 1 LED bulb

Everyone is a Lighting User

Electrical Lighting

- Human Control:
 - On/Off
 - Dimming
- Sensor Control: Limited or not used
 - Daylight sensor
 - Motion sensor

Electronic Lighting

Courtesy: Fraunhofer HHI

Smart Lighting

- Location based services
- Control

Vehicle & transportation

- Vehicle-to-Vehicle
- Vehicle-to-Infrastructure

Device-to-Device Communication

Places where RF is undesirable?

- Hospitals
- Airplanes

Courtesy: 123F

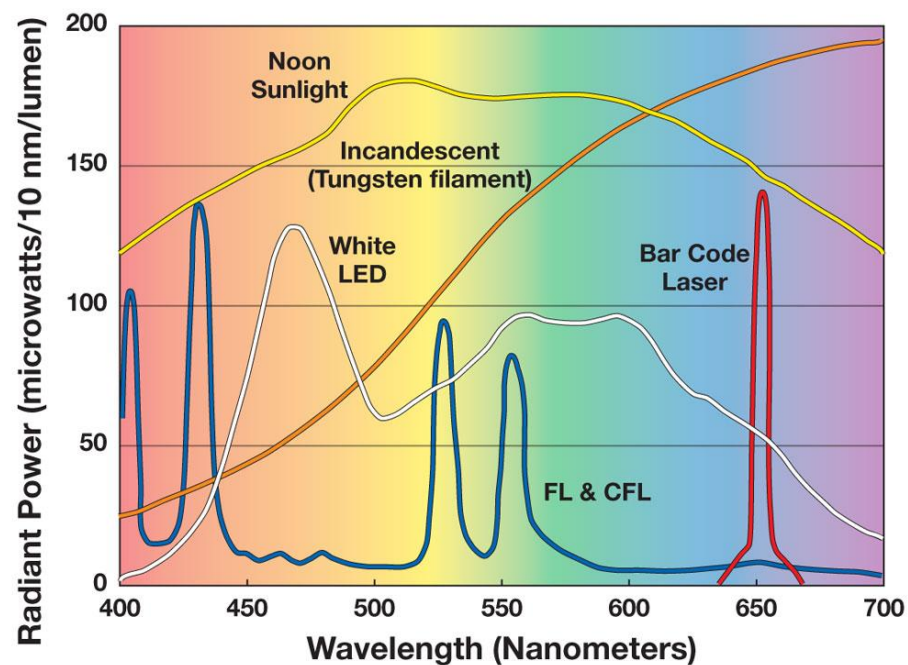

Electromagnetic

* In terahertz (THz); 1THz = 1×10^{12} cycles per second.
 ** In nanometres (nm); 1nm = 1×10^{-9} metre.

Visible

Light Sources

Color-Temperature

Beam Angle

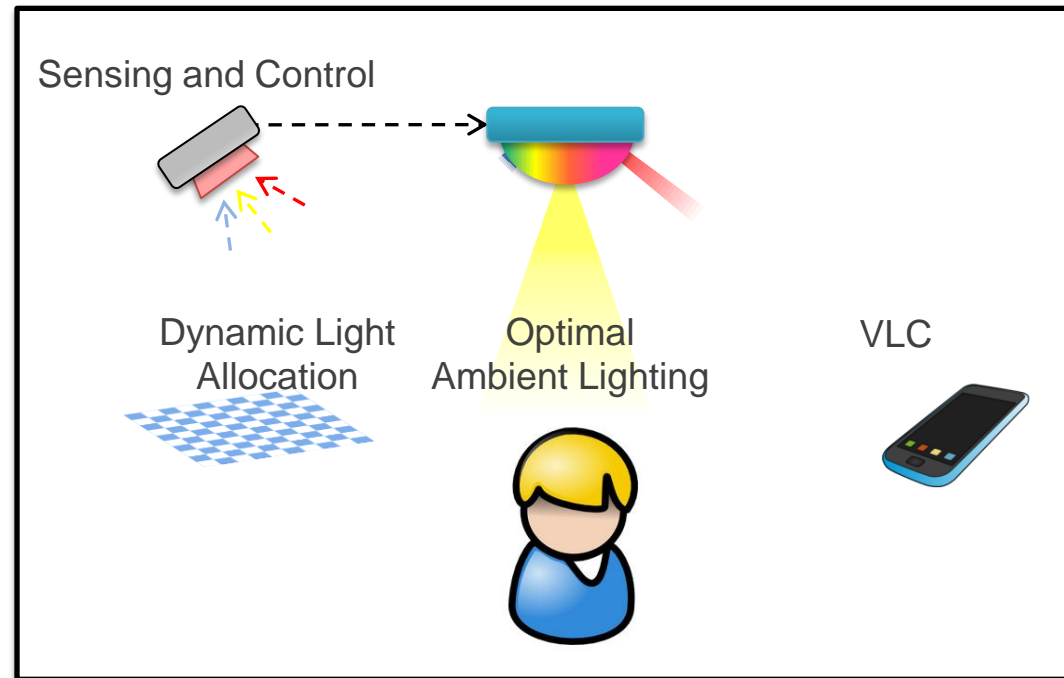

Intensity Modulation

Second Wave

Integrate Controls and VLC Research

- Spectral Control
- Color-Temperature Control
- Spatial Control
- Temporal Control; VLC

Lighting and Display Fusion

TiLED Project

multiple-input and multiple-output (MIMO)

Luminaires

Optical
Channel

Imaging
Optics

Imaging
Sensor

MIMO Transmitter

2x2 MIMO Receiver

Smart Lighting Lab kit contents:

- 2 Rhett Boards
- 2 USB to micro-USB cables
- 2 Breadboards
- 2 Wiring kits
- Resistors and capacitors
- Red, green and white LEDs
- Photodiode(PD)
- Operational amplifier (Op-Amp)
- Exclusive-OR (XOR) gate
- Lens
- Flashlight
- Tape measure
- Protractor
- Speaker
- Transceiver printed circuit board (PCB)
 - Board Components
 - 2 USB to serial cables (FTDI)

Mobile Studio Project: <http://www.mobilestudioproject.com/>

Department of Electrical & Computer Engineering

-V: -4V DC (capable of providing ~ 50mA)

+V: +4V DC (capable of providing ~ 50mA)

Impedance Analyzer (not released)

Impedance Analyzer (not released)

GND : Analog ground

Speaker - : Audio Out

Speaker + : Audio Out

GND : Analog ground

Phones R : Audio, Out Right Channel

Phones L : Audio, Out Left Channel

GND : Analog ground

AWG2 : Arbitrary Waveform Generator, Channel 2

GND : Analog ground

AWG1 : Arbitrary Waveform Generator, Channel 1

A2- : Analog, Channel 2 Input

GND : analog ground

A2+ : Analog, Channel 2 Input

A1- : Analog, Channel 1 Input

GND : Analog ground

A1+ : Analog, Channel 1 Input

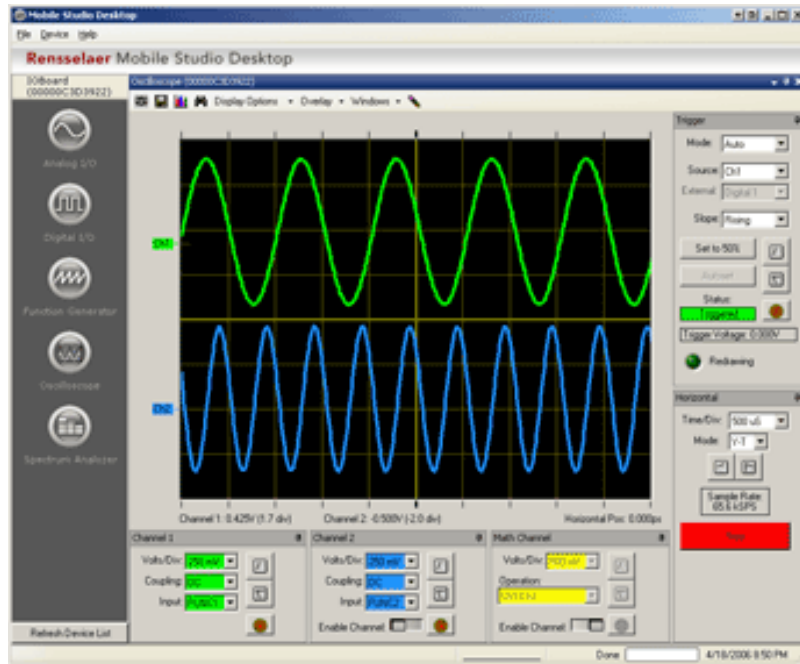

Vertical Connector
(top to bottom)

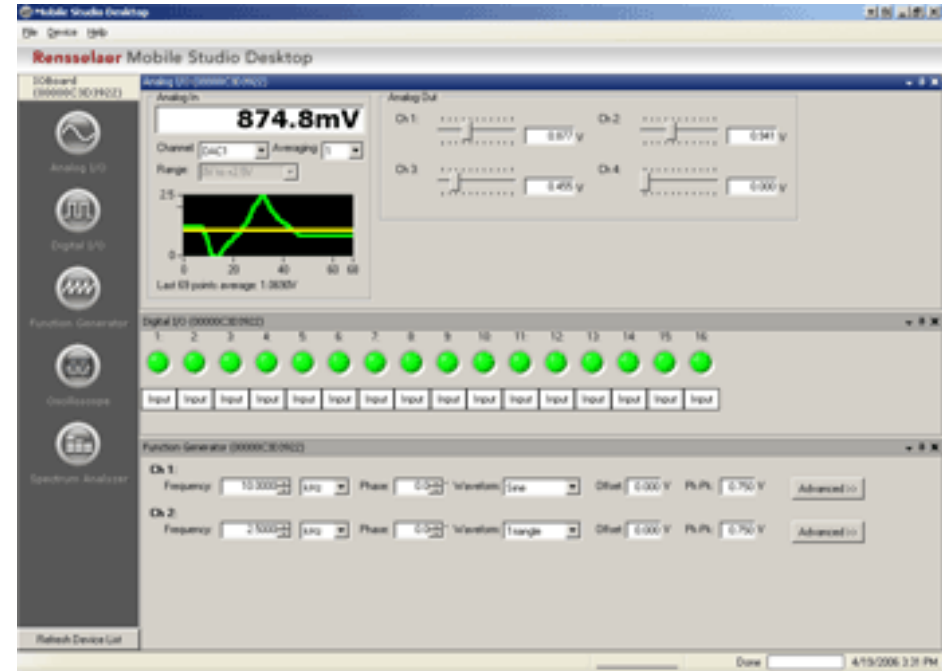

Digital I/O 1 - 16 : Digital Input/Output Pins
PWM1 : Pulse Width Modulation, Channel 1
PWM2 : Pulse Width Modulation, Channel 2
3.3V : +3.3V DC
DGND : Digital ground

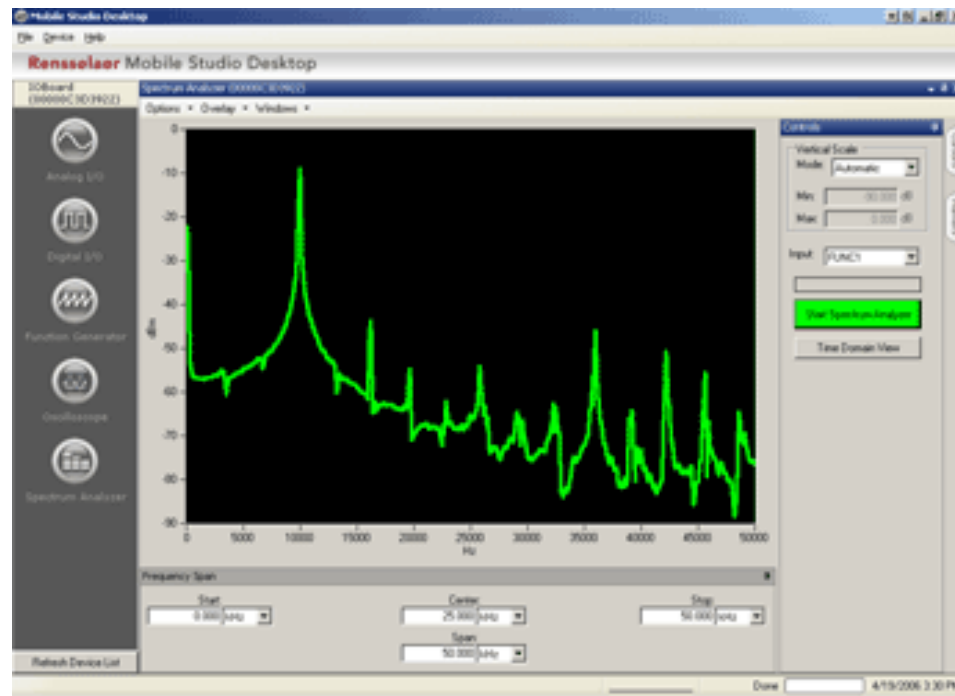

Horizontal Connector
 (left to right)

The Oscilloscope Display

The Function Generator Display

Time/Frequency Domain

The Spectrum Analyzer Display

AC/DC coupling

Phase Shift

Sine

Triangle

Sawtooth

Square

In-phase ($\phi = 0^\circ$)

Positive Phase ($+\phi$)

Negative Phase ($-\phi$)

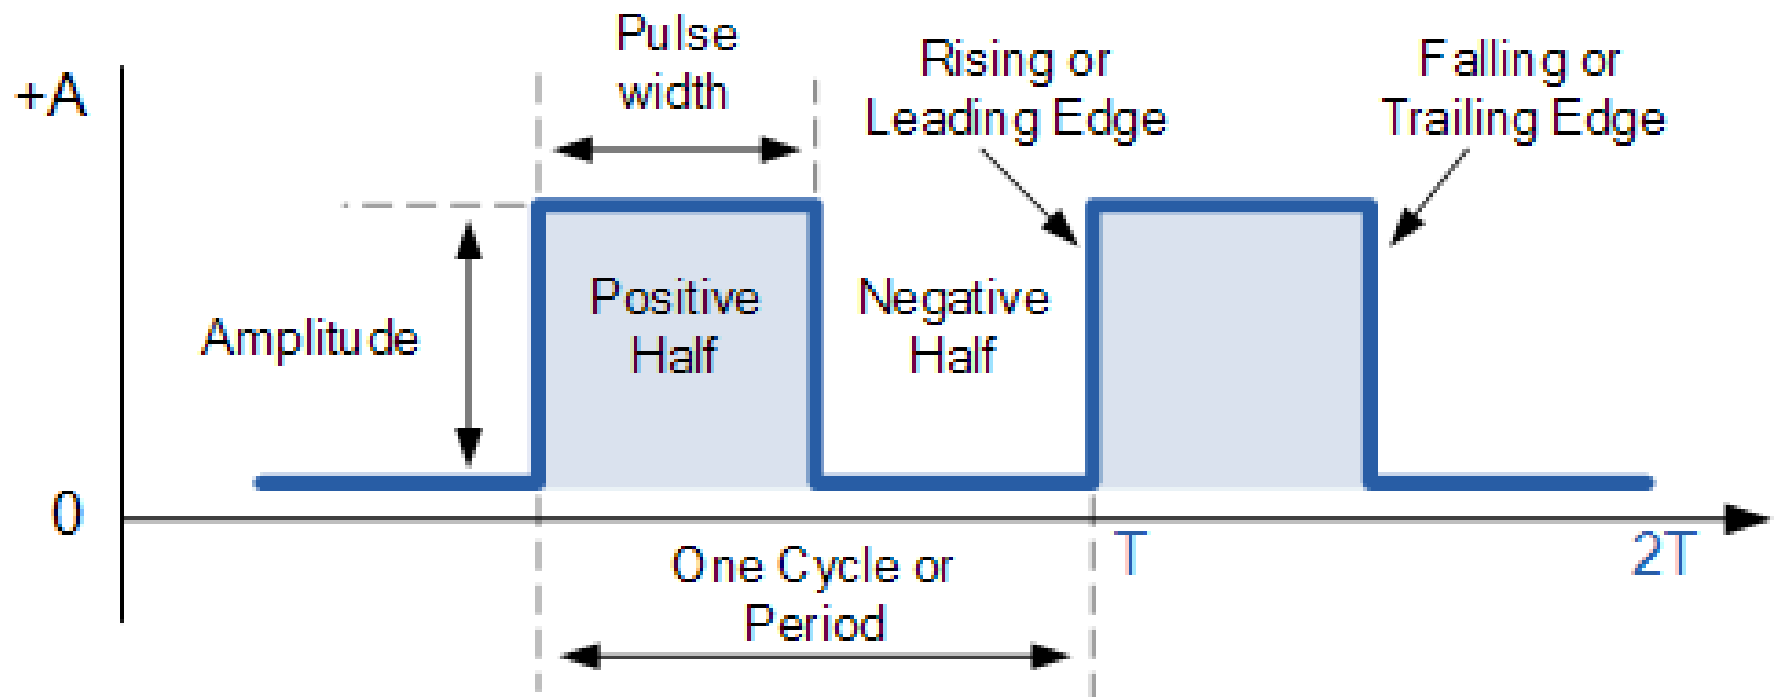

Oscillating Sine Wave

$$2\pi \text{ rads} = 360^\circ$$

$$\therefore 1 \text{ rad} = 57.3^\circ$$

Approximate a square-wave pattern with a suitable sum that involves a fundamental sine-wave plus a combination of harmonics of this fundamental frequency. Such sums are called **Fourier series**.
