Chapter 17

MARKETS WITH MARKET POWER
Microeconomics in Context (Goodwin, et al.), 3rd Edition

Chapter Summary

Now that you understand the model of a perfectly competitive market, this chapter complicates the picture by adding the element of market power. You will be introduced to the traditional models of monopoly, monopolistic competition, and oligopoly. You will learn about how firms maximize profits in these more complicated theoretical situations, and also about some of the ways in which firms may negotiate with one another—either explicitly or implicitly—to attain their preferred outcomes. At the end of the chapter we will discuss two industries—agricultural products and health care—that, for different reasons, are characterized by highly imperfect competition.

Objectives

After reading and reviewing this chapter, you should be able to:

1. Define a monopoly and describe how a monopolist maximizes profits.
2. Understand why a monopoly may or may not be efficient.
3. Define monopolistic competition and describe how profits are maximized in these markets.
4. Define oligopoly and discuss firm behavior under conditions of oligopoly.
5. Understand the effect of government farm policy on food markets.
6. Explain the reasons why the health care industry is limited in its degree of competitiveness and understand both the pros and cons.

Key Terms

- pure monopoly
- oligopoly
- natural monopoly
- predatory pricing
- local monopoly
- price maker
- nonprice competition
- duopoly
- price war
- tacit collusion
- price leadership
- monopolistic competition
- barriers to entry
- exclusionary practices
- dumping
- regulated monopoly
- price discrimination
- industrial concentration ratio
- payoff matrix
- collusion
- price fixing
- adverse selection
Active Review Questions

Fill in the Blank

1. A monopoly that emerges because of economies of scale is called a _______________ monopoly.

2. Joe’s Superstore prevents competitors from entering the market by temporarily pricing its goods below cost, thus driving new entrants out of business. This practice is known as _______________ pricing.

3. Selling goods to another country at a price below the cost of production is known as _______________.

4. The marginal revenue curve for a monopolist is (flat/downward-sloping/upward-sloping) _______________.

5. Market power in the form of a monopoly creates benefits for the (buyer/seller) _______________ at the expense of the (buyer/seller) _______________.

6. When the government pays a subsidy to the farmer, it results in a(n) _______________ of food.

Questions #7, #8, and #9 refer to the graph below. In this graph, $Q_E$ refers to the quantity of a good that would be provided under conditions of perfect competition, and $Q_M$ refers to the quantity of the same good that is provided under conditions of monopoly.

7. Area A shows the magnitude of _______________.

8. Area D shows the magnitude of _______________.

9. Area B represents a transfer from _______________ to _______________.

10. A firm that charges different prices to different buyers depending on their ability and willingness to pay is referred to as a _______________ seller.
True/False

11. In a hypothetical case of perfect price discrimination, producer surplus is completely eliminated.

12. In a hypothetical case of perfect price discrimination, deadweight loss is completely eliminated.

13. “Monopolistic competition” includes some characteristics of perfect competition and some characteristics of monopoly.

14. In a situation of monopolistic competition, no close substitutes are available.

15. Monopolistically competitive firms have higher unit costs than would occur in a perfectly competitive market.

16. The health care industry is, for the most part, characterized by competitive markets.

Short Answer

17. Describe one way in which monopolistically competitive firms work to protect their “miniature monopoly”.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

18. List three conditions of the idealized market structure of monopoly.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

19. Explain how network externalities can lead to monopolization.

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________

20. Briefly describe the pros and cons of allowing drug companies to enjoy substantial market power (through, e.g., the use of patents).

__________________________________________________________________
__________________________________________________________________
__________________________________________________________________
21. Briefly explain how monopolistic competition differs from perfect competition.

__________________________________________________________________

__________________________________________________________________

__________________________________________________________________

22. Describe the main characteristics of oligopoly.

__________________________________________________________________

__________________________________________________________________

__________________________________________________________________

__________________________________________________________________

23. Explain in what ways markets for food are not as competitive as they could be.

Problems

1. Suppose that a monopolistic firm produces hair dryers. The chart below shows the quantities of hair dryers that can be sold at various prices.

<table>
<thead>
<tr>
<th>Quantity of Hairdryers</th>
<th>Price of Hairdryers</th>
<th>Total Revenue</th>
<th>Marginal Revenue</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$100</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>$90</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>$80</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>$70</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>$60</td>
<td></td>
<td></td>
</tr>
<tr>
<td>6</td>
<td>$50</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

a. Fill in the total and marginal revenue columns in the chart shown above.

b. If marginal cost is equal to marginal revenue at MC=MR=$20, what is the profit maximizing level of production (assuming that the firm should produce at all)?
2. The following graph shows the demand curve and the marginal cost curve for a monopolistic firm producing electric cars.

![Graph showing demand and marginal cost curves]

- Sketch a possible marginal revenue curve for this firm.
- On the horizontal axis, label the profit-maximizing level of production as \( Q_1 \). On the vertical axis, label the price \( P_1 \) that the firm will charge at the profit maximizing level of production.
- Label the area of deadweight loss in the graph you draw for part (b).
- How do the monopolistic price and quantity compare to those of competitive market equilibrium?

3. Harry’s Auto Shop is a perfectly price discriminating seller. Harry has an uncanny ability to assess how much people are willing to pay for a car, and he sets prices accordingly.

- Sketch the demand curve and the marginal cost curve for Harry’s Auto Shop.
- Show the area that represents consumer surplus on the graph you drew for part (a).
- Show the area of the producer surplus on the same graph.
4. Ten breakfast cereal producers operate in a market characterized by monopolistic competition. The demand, marginal revenue, and marginal cost curves faced by an individual breakfast cereal producer are shown below.

Suppose that five new breakfast cereal producers enter the market. Show the new demand curve and the new marginal revenue curve that result on the graph above.

5. Suppose the market for cookbooks is a duopoly. The chart below shows a payoff matrix for the two cookbook producers.

<table>
<thead>
<tr>
<th>Producer 1’s options</th>
<th>Low Price</th>
<th>High Price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low Price</td>
<td>$20</td>
<td>$80</td>
</tr>
<tr>
<td>High Price</td>
<td>$1</td>
<td>$100</td>
</tr>
</tbody>
</table>

Producer 2’s options

a. Based on the information shown in the payoff matrix above, how much profit would each firm make if the firms were non-cooperative?

b. If producer 2 charged a high price and producer 1 charges a low price, how much profit would producer 1 make?
c. If the firms colluded and set prices together, how much profit would each producer make?

Self Test

1. Which of the following is a condition of monopoly?
   a. Two or more sellers.
   b. Only one buyer.
   c. A good with several close substitutes.
   d. Barriers to entry.
   e. None of the above.

2. A “natural monopoly” is
   a. An oligopoly.
   b. A monopoly characterized by diseconomies of scale.
   c. A monopoly that emerges because of economies of scale.
   d. A monopoly on a scarce natural resource.
   e. A monopoly that solves the problem of diseconomies of scale.

3. In international trade, “dumping” refers to
   a. Exclusionary practices.
   b. Charging unfairly high prices.
   c. Providing unwanted goods free of charge.
   d. Selling goods at a price below the cost of production.
   e. Selling goods above market price.

4. Which of the following statements is false?
   a. Monopolistic firms maximize profits at the point where MC=MR.
   b. Monopolistic firms are price takers.
   c. Monopolistic firms face a downward sloping demand curve.
   d. Monopolistic firms face a downward sloping marginal revenue curve.
   e. All of the above are true.

5. The demand curve for the output of a monopolistic firm is equal to
   a. The marginal revenue for the product in question.
   b. The market supply curve for the product in question.
   c. The market demand curve for the product in question.
   d. The demand curve for a firm in a perfectly competitive market.
e. The concentration ratio of the firm.

6. A monopolistic firm can sell more by

   a. Advertising its product successfully.
   b. Competing effectively with other firms.
   c. Lowering the price of its product.
   d. Both a and c are true.
   e. Options a, b, and c are all true.

7. Suppose a firm can sell five units of output at a price of $10 each. To sell six units of output, the firm must lower its price to $9 per unit. To sell seven units, the firm must lower its price to $8 per unit. Which of the following statements is true?

   a. The firm can maximize profits at all of the production levels listed above.
   b. The firm faces an upward sloping demand curve.
   c. Based on the information given above, we can conclude that seven units is the profit maximizing level of production.
   d. Based on the information given above, we can conclude that this firm faces net losses at the levels of production considered here.
   e. The firm can be described as a “price maker”.

8. Suppose a firm can sell one unit of product for $50, two units for $45 each, three units for $40 each, or four units for $35 each. When the firm sells four units, marginal revenues is equal to

   a. $5.
   b. $20.
   c. $25.
   d. $30.
   e. $35.

9. Which of the following statements is true?

   a. Monopolistic firms face zero profits in the long run.
   b. Monopolistic situations do not involve any inefficiencies.
   c. The monopolistic firm always faces a downward sloping marginal cost curve.
   d. The perfectly competitive firm faces a horizontal marginal revenue curve.
   e. The monopolistic firm faces a horizontal marginal revenue curve.
Questions #10 and #11 refer to the graph below.

The graph shown above depicts the demand, marginal revenue, and marginal cost curves faced by a monopolistic firm.

10. Point A indicates
   a. Total cost.
   b. The point where MR=MC.
   c. The price buyers are willing to pay at equilibrium.
   d. The point where MC=P.
   e. Total revenue.

11. Which of the following statements is false?
   a. When the firm chooses a level of production F, buyers will pay a price E.
   b. Point A is on the marginal cost curve.
   c. Point B shows the level of demand that corresponds to the profit maximizing level of production.
   d. Point C indicates the price and quantity of production that would exist in a competitive equilibrium.
   e. Because the firm described by this graph is a monopoly, production is lower and price is higher than they would be at competitive equilibrium.

12. Rent-seeking behavior is
   a. An effort to find affordable housing.
   b. An effort to get transfers or favors.
   c. A behavior of all monopolists.
   d. A behavior of governments only.
   e. A behavior that facilitates creation of a perfectly competitive market.
13. Which of the following statements is false?

a. In some cases, monopoly can be a preferable option for society as a whole compared with a situation of perfect competition.

b. For some services, such as passenger rail transportation, government subsidies to a monopolist may produce the most socially beneficial outcome.

c. Government regulation of an industry characterized by natural monopoly can help to reduce the inefficiencies associated with market power.

d. Optimally efficient pricing always leads to self-sustaining revenues.

e. All of the above are true.

14. Which of the following is an example of a price discriminating seller?

a. Frank sells condominiums only to buyers of a certain ethnic background.

b. Ellen charges different prices to different buyers, depending on their ethnic or religious background.

c. Amelia charges different prices to different buyers depending on their ability or willingness to pay.

d. An airline charges the same price to all travelers.

e. Both a and b are correct.

15. When you go shopping you discover that you can choose among twenty different brands of breakfast cereal, all with about the same nutritional content. The proliferation of cereal options is an example of

a. product differentiation

b. oligopoly

c. perfect competition

d. a price war

e. monopoly

16. Which of the following statements is true of a monopolistically competitive firm?

a. It faces a downward sloping demand curve.

b. It earns positive economic profits in the long run.

c. It produces more than a perfectly competitive firm.

d. It charges lower prices than a perfectly competitive firm.

e. Its profits are protected by significant barriers to entry.
17. Under conditions of oligopoly, firms may collude in order to

   a. Avoid the outcome associated with the prisoner’s dilemma.
   b. Increase competition.
   c. Solve the concentration ratio problem.
   d. Create a prisoner’s dilemma for buyers.
   e. Initiate a price war with one another.

18. Which of the following is a form of implicit collusion?

   a. Duopoly
   b. Price wars
   c. Non-price competition
   d. Prisoner’s dilemma
   e. Price leadership

19. Which of the following statements about oligopoly is false?

   a. Under conditions of oligopoly, entry into the market is difficult.
   b. The amount of long-run economic profit made by oligopolistic firms is variable.
   c. Each firm in an oligopoly makes decisions without regard for the actions of other firms.
   d. Game theory is used to analyze the behavior of firms in an oligopoly.
   e. Firms in an oligopolistic market often have an incentive to collude.

20. One type of market distortion employed by the U.S. government in the markets for agricultural produce is

   a. a price ceiling.
   b. a price floor.
   c. a deadweight loss.
   d. price fixing.
   e. price discrimination.

21. Which of the following is false about U.S. farm policy?

   a. It causes land to be degraded more rapidly than otherwise.
   b. It intensifies inequality by providing disproportionate subsidies to large landholders.
   c. It sometimes helps relieve famines in other countries, at least in the short term.
   d. It often distorts international food markets.
   e. All of the above are true.
22. Which of the following has the United States *not* done with its food surpluses in the past?

a. Sell it to the Soviet Union.
b. Give it to poor countries to help with famine relief.
c. Confiscate it and make it available at regional food banks at a low price.
d. Destroy it.
e. The United States has, at one time or another, done *all* of the above.

23. Among reasons for why markets in the health care industry are not highly competitive are

a. the complete absence of deadweight losses.
b. heterogeneous products.
c. barriers to entry.
d. information asymmetry.
e. price ambiguity.

24. The health insurance and pharmaceutical industries are best described as

a. monopolies.
b. monopolistic competitors.
c. oligopolies.
d. perfectly competitive markets.
e. quasi-governments.

25. A phenomenon that favors the weaker members of a given population to the detriment of the system as a whole is known as

a. suboptimal rationality.
b. counterproductive targeting.
c. rent seeking.
d. adverse selection.
e. inefficient but fair.
Answers to Active Review Questions

1. natural
2. predatory
3. dumping
4. downward-sloping
5. seller; buyer
6. overproduction (or surplus)
7. consumer surplus
8. deadweight loss
9. consumer; producer
10. price discriminating
11. False. In a hypothetical case of perfect price discrimination, consumer surplus is completely eliminated.
12. True.
13. True.
14. False.
15. True.
16. False.
17. Monopolistically competitive firms often engage in non-price competition (e.g. advertising, using attractive packaging, etc.).
18. (a) There is only one seller. (b) The good being sold has no close substitutes. (c) Barriers to entry prevent other firms from starting to produce the good in question.
19. Network externalities can “lock in” one technology, product, or system, making it hard for other options to gain a foothold in the market. The textbook discusses the example of computer operating systems: once a large number of people have adopted one operating system, the firm producing that system has a significant advantage over new entrants that might attempt to compete.
20. Offering patents can create an incentive to develop new drugs. On the other hand, the high prices of patented drugs can mean that life-saving drugs are denied to thousands or even millions of people who need them. (It is worth noting that other options are available to motivate research and development in pharmaceuticals.)
21. In monopolistic competition, products are differentiated instead of identical. Also, more important, while there is only one seller for monopoly, there are generally many in a monopolistically competitive market structure. We can say that each has a “mini-monopoly” for its own niche (i.e., differentiated) product.
22. Oligopoly is a structure where a few sellers dominate the market, and at least some control enough of the market to be able to influence price; and entry by competitors is very difficult.
23. Markets for food are not especially competitive, given that farmers have for decades enjoyed government subsidies. The markets have grown increasingly distorted over time, as relatively few farms have grown immense in size, resulting in disproportionate subsidies accruing to them (the payments are often in relation
Many argue that such a generous policy does nothing to promote efficiency in food production—quite the contrary!

Answers to Problems

1. a.
