Chapter 13

FINANCIAL INSTABILITY AND ECONOMIC INEQUALITY

Chapter Overview

This chapter discusses some of the complexities of real-world economics by introducing you to two of the key challenges of the current century—financial instability and economic inequality. It begins by reviewing the origins and development of the financial crisis of 2007-8 and discussing the policy responses. It then explains the occurrence of such crisis, in general, based on Minsky’s theory of financial instability. The role of deregulation and financialization in increasing the vulnerability of both the real and financial sectors in the U.S. economy is discussed in some detail. A description of some of the key factors contributing to the rising economic inequality in the United States in recent decades is presented next. The final section makes some recommendations on addressing macroeconomic instability and economic inequality. The debate over policy responses continues, and this chapter provides you with the background you need to assess the current state of macroeconomic policy.

Chapter Objectives

After reading and reviewing this chapter, you should be able to:

1. Describe the underlying causes of the 2007-08 financial crisis and explain the severity and impacts of the crisis.
2. Describe the major fiscal and monetary responses as well as the financial regulatory reforms implemented to address the crisis.
3. Understand the role of deregulation and financialization in increasing the vulnerability of the real and financial sectors of the U.S. economy.
4. Describe Minsky’s theory of financial instability to explain the occurrence of financial crisis and understand the role of regulation in managing instability.
5. Understand the similarities and differences between the Great Recession and the Great Depression.
6. Describe the trends in inequality in the United States in the past few decades.
7. Identify the underlying causes of rising wage inequality and the role of financialization and economic policies in contributing to the rise in inequality.
8. Discuss policy measures that might help create a more stable and sustainable economic system.
Key Terms

subprime mortgage  financial assets
securitization  leverage
moral hazard  nonbank financial institution
credit rating agencies  financialization
“too big to fail”  Gini coefficient

Active Review

Fill in the Blank

1. The process of pooling various kinds of loans, slicing and sorting them according to their risk levels, and repackaging them into financial instruments is known as ___________________.

2. Mortgages given to people with poor credit are known as ___________________.

3. The availability of government bailouts for large firms can encourage excessive risk-taking, a phenomenon known as ___________________.

4. The major financial reform passed in the wake of the 2007-9 crisis was the _______________ bill.

5. Institutions that accept funds and provide loans are known as ___________________.

6. The law formerly separating commercial and investment banking, which was repealed in 1999, was known as the ___________________.

7. The process of increasing size and importance of the financial markets in the operation of the economy is known as___________________.

8. The theory that unregulated markets will always produce instability and crisis is referred to as the _________________.

9. If income were perfectly equally distributed within a country, the value of the Gini ratio for that country would be _________________.

10. The distribution of wealth tends to be ________________ (more/less) unequal than the distribution of income.

11. A tax on financial transactions is often referred to as ________________, after the economist who first proposed it.
True or False

12. High mortgage rates contributed to the development of the housing bubble.

13. Since the 1970s, a greater proportion of money in the financial system has been directed towards funding productive investment, while investment in financial instruments have declined.

14. The 2008 crisis was referred to as the “Minsky’s moment” because Minsky’s theory of financial instability predicted such a crisis.

15. The Great Recession was less severe than the Great Depression because of the deregulation of the financial system since the 1980s.

16. The Dodd-Frank bill promoted deregulation of banks.

17. The top 1% of American households own more than one-third of all wealth.

18. The richest fifth of American households receive more than half of all income.

Short Answer

19. What were some of the factors leading to the housing bubble?

20. What were the major fiscal and monetary policy responses to the crisis?

21. In what ways can unemployment be both a result and a cause of deepening recession?

22. How does Minsky’s theory explain the occurrence of financial instability in the economic system?
23. Briefly describe the trends in income inequality in the United States over the last 100 years.

24. What are some of the factors explaining the rise of inequality in the United States in the past few decades?

25. How was globalization related to increasing inequality?

26. Discuss some of the ways in which financial resources may be directed towards more socially useful investments.

Problems

1. Refer to Figure 13.1 in the text to describe how interest rates were related to the development and collapse of the housing bubble.

2. Refer to Figure 13.5 in the text to describe how the distribution of bank assets changed between 1984 and 2019.
3. As suggested in Exercise 1 in the text, you can find data on the Great Recession at the Federal Reserve Economic Database http://research.stlouisfed.org/fred2/ To find data on unemployment rates, go to Current Population Survey/Unemployment Rate/Civilian Unemployment Rate/Seasonally Adjusted (do not select Natural Rate of Unemployment on the main Population, Employment, and Labor Markets page – this does not show total unemployment). Drag the cursor over graph to see the data on unemployment during the last four recessions. How does the Great Recession compare to previous recessions?

**Self Test**

1. Factors contributing to the housing bubble included:
   a. Unprecedented access to credit.
   b. Rising unemployment.
   c. Low interest rates.
   d. Both (a) and (b).
   e. Both (a) and (c).

2. During the recession of 2007-9:
   a. The U.S. economy lost nearly 9 million jobs.
   b. About 11 million homeowners faced foreclosure.
   c. U.S. business profits fell.
   d. U.S. consumer spending declined.
   e. All of the above.

3. The underlying causes of the financial crisis of 2007-8 included all of the following except:
   a. Increasing bank size.
   b. Increasing inequality.
   c. Excessively contractionary monetary policy.
   d. Deregulation
   e. Short-term corporate incentive.
4. Comparing the Great Depression and the Great Recession, we can say that:

   a. The Great Recession was more severe in terms of unemployment.
   b. The Great Depression was more severe in terms of unemployment.
   c. Both were preceded by bubbles in asset values.
   d. Both (a) and (c).
   e. Both (b) and (c).

5. Government responses to the 2007-9 recession included all of the following except:

   a. Stimulus spending by state and local governments.
   b. Bailouts for key financial institutions.
   c. Stimulus spending by the federal government.
   d. Expansionary monetary policy.
   e. “Quantitative easing” by the Fed.

6. The Dodd-Frank bill does all of the following except:

   a. Sets up a Consumer Financial Protection Bureau.
   b. Relaxes bank regulation.
   c. Institutes minimum lending standards.
   d. Empowers regulators to aggressively pursue financial fraud, conflicts of interest and manipulation of system.
   e. Requires greater disclosure by ratings agencies.

7. Nonbank institutions …

   a. have been growing in importance in our financial system.
   b. often provide much more attractive alternatives to traditional savings accounts.
   c. are typically subject to less government regulation than traditional banks.
   d. include pension funds and insurance companies.
   e. All of these statements are accurate.

8. Speculative bubbles …

   a. generally form for psychological and economic reasons.
   b. are an important source of economic growth.
   c. generally occur due to a general lack of liquidity.
   d. are generally associated with tight credit conditions.
   e. None of these statements is true.
9. Regulations put in place after the Great Depression include all of the following except:
   a. Glass-Steagall Act
   b. Dodd-Frank Bill
   c. Regulation Q
   d. Restrictions on banking across state lines
   e. Imposition of several capital and leverage requirements on the financial sector

10. The increase in size of banks since the 1980s is explained by:
   a. Loosening of restrictions on capital across borders
   b. Removing interest rate ceilings
   c. Financial Services Modernization Act
   d. Dodd-Frank bill
   e. (a), (b) and (c)

11. Which of the following statements is TRUE?
   a. The frequency of bank mergers increased steadily from 1980 to 2000, and has declined since then.
   b. Deregulation of the financial sectors has helped reduce the risk-taking behavior of banks.
   c. The Dodd-Frank bill reinstituted the separation between commercial and investment banks.
   d. Non-financial firms have become increasingly financialized through increasing investment in financial instruments.
   e. All of the above.

12. The 'efficient market hypothesis is based on all the following assumptions except:
   a. Individuals are rational decision-makers.
   b. Markets are perfectly competitive.
   c. Individual decision-making is influenced by their expectations.
   d. Individuals possess complete information about the market price of assets.
   e. (a) and (c)

13. According to Minsky, during an economic expansion
   a. regulations on financial firms are likely to become more strict.
   b. financial firms become more confident.
   c. financial firms start taking more risks.
   d. financial firms become stronger.
   e. Both (b) and (c).
14. Which of the following statements is FALSE?

a. Data from 1948 to 2017 shows that corporate profits have always grown faster than wages.
b. Over time, the labor productivity in the U.S. has declined.
c. The wage-productivity gap has narrowed in the last three decades.
d. Union membership rate in the U.S. has gradually increased since the 1970s.
e. All of the above.

15. In the year 2010, suppose the Gini ratio for Canada was 0.30 and the Gini ratio for the US was 0.50. In the year 2015, suppose the Gini ratio for Canada rises to 0.35 and that for U.S. was 0.48. Which of the following statements is true?

a. Canada has greater inequality than the US.
b. Canada has greater inequality in 2015 than it did in 2010.
c. Inequality in U.S. has increased from 2010 to 2015.
d. Both (a) and (c) are false.
e. All of the above are false.

16. Which of the following explains financialization as a factor in rising inequality in the U.S. economy?

a. Wages in the financial sector has grown much faster than wages in other sectors.
b. A greater share of income has gone to those who own assets, most of whom tend to be wealthier individuals.
c. Executive pay has increased sharply due to a change in corporate pay structure, where a larger proportion of executive pay has come in the form of stock options and bonuses.
d. Workers’ bargaining power has declined as corporations have shifted their reliance on earnings through financial channels.
e. All of the above.

17. Since the 1980s,

a. top marginal tax rates have increased.
b. payroll tax rates have declined.
c. effective tax rates paid by the rich and poor has narrowed.
d. spending on welfare has increased.
e. All of the above.
18. Policies to reduce inequality include all the following, except:

   a. Lowering corporate taxes.
   b. Increasing minimum wages.
   c. Strengthening labor unions.
   d. Increasing investment in human capital.
   e. Providing support to low-income workers.

19. Which of the following might help direct financial resources to more socially useful investments?

   a. Increasing payroll taxes.
   b. Encouraging companies to engage in stock buybacks.
   c. Promoting regional and community financial institutions.
   d. Increasing investment in financial assets.
   e. All of the above.

20. Proposals for regulate the financial system include:

   a. A financial transactions tax.
   b. An increased sales tax.
   c. A lower sales tax.
   d. A general reduction in business taxes.
   e. A general increase in business taxes.

**Answers to Active Review Questions**

1. securitization
2. sub-prime mortgages
3. moral hazard
4. Dodd-Frank
5. financial intermediaries
6. Glass-Steagall Act
7. financialization
8. financial instability hypothesis
9. zero
10. more
11. Tobin tax
12. False. It was low mortgage rates that feed the growth of the housing bubble.
13. False. Role of finance in funding productive investment has declined while a greater portion of money has gone to investment in financial instruments.
14. True.
15. False. The Great Recession was less severe than the Great Depression because of the existence of government regulations, automatic stabilizers, and the imposition of expansionary monetary and fiscal policy during the 2008 crisis.
16. False. The goal was to regulate the banks, though it has been watered down to a great extent through intense lobbying by the financial sector.
17. True
18. True
19. Factors leading to the housing bubble included a period of low interest rates, unprecedented expansion of credit including sub-prime mortgages, and speculation in the housing market driving prices even higher.

20. After the immediate responses of bailouts for endangered financial institutions, the Federal government instituted large-scale stimulus spending to prevent a collapse in aggregate demand and to promote economic recovery. At the same time, the Federal Reserve engaged in an extraordinarily expansionary monetary policy, purchasing hundreds of billions of dollars’ worth both of Treasury bonds (traditional expansionary policy) and other financial assets (“quantitative easing”).

21. As the economy goes into recession, more people are laid off. Unemployed workers have less income to spend, leading to a decline in consumption. This lowers business profits, which in turn promotes further cutbacks and layoffs. The process creates a vicious spiral of unemployment and lower consumption that feeds on itself and deepens the recession.

22. Minsky’s theory argues that uncertainty about the future and expectations of market participants play a key role in influencing the value of assets. When the economy is just recovering from a crisis investors will be cautious and maintain large safety margins. However, as the economy gains strength, investors will become more optimistic and pursue risky ideas which weakens the financial system and makes it more credit-dependent and vulnerable to crisis.

23. Income inequality was relatively high leading up to the Great Depression. Then inequality decreased for several decades, until the late 1960s. Since then, inequality has generally increased. Current levels of inequality are similar to, or greater than, the levels observed in the early 20th century.

24. Rising wage-productivity gap due to decline of unions, globalization and trade, and technological change. The financialization of the economy and the fiscal policies of the past few decades have also contributed to the rise in inequality.

25. Globalization has lowered the bargaining power of workers as corporations have had to ability to look around the world and also relocate their production facilities to hire low-cost workers (mostly in developing countries). Additionally, competition from low-priced imports has also eliminated many jobs, especially in the industrial sector, and pushed many middle-income workers to move to lower-income jobs.

26. Promoting smaller regional and community financial institutions that support local home-buyers and businesses. Institute small tax on financial transactions to discourage speculations and prevent the formation of asset price bubbles. Restrict companies from buying back their own stocks and encourage them to invest in their employees through tax incentives. Encourage cooperative based organizations that focus on improving the well-being of workers.
Answers to Problems

1. A steep decline in interest rates after 2001 contributed to inflating the bubble in housing prices. The fact that interest rates rose in 2005 and 2006 may have been a precipitating factor in the bursting of the bubble. Once the bubble burst, with a steep decline in housing prices, interest rates also fell as the Fed moved back to an expansionary policy to respond to the crisis and ensuing recession.

2. Bank assets became increasingly concentrated in the largest banks, with the share of assets held by banks with assets over $250 billion went from about 5% to about 50% between 1996 and 2019. The relatively large banks with assets between $10 billion and $250 billion increased from being less than 30% in 1984 to almost 50% between 1994 and 2000, and then declined to about 35% in 2019. Meanwhile the share of the smallest banks, those with less than $100 million in assets, fell from about 14% to about 0.5% between 1984 and 2019. The shares of intermediate-sized banks also declined, with the share of banks having assets between $100 million and $1 billion going from about 26% to less than 10%, and the share of banks having between $1 and $10 billion going from about 32% to about 10% between 1984 and 2019.

3. The Great Recession was much more severe than the previous three recessions, with an increase in unemployment of over five percentage points. The FRED graph also shows that unemployment continued to rise after the formal end of the recession, then declined only slowly, falling below 7% only at the end of 2013, and falling even lower to about 4% in 2017.

Answers to Self Test Questions

1. E  11. D
2. E  12. C
4. E  14. E
5. A  15. B
7. E  17. C
8. A  18. A
10. E  20. A
