ENG ME 400 Engineering Mathematics

Instructor:

M. S. Howe

EMA 218 (730 Commonwealth Ave)

mshowe@bu.edu

Prerequisites:

CAS MA 225 Multivariate Calculus; CAS MA 226 Differential Equations (or equivalent). You are expected to know how to:

- solve simple first and second order linear ordinary differential equations

- differentiate and integrate elementary functions, including trigonometric, exponential and hyperbolic functions

- integrate by parts; evaluate simple surface and volume integrals

- use the binomial theorem and the series expansions of elementary functions (sine, cosine, exponential, logarithmic and hyperbolic functions)

It is your responsibility to test yourself by

- taking the **prerequisites self test** at the end of these notes.

Textbook:

Lectures are based on *Mathematical Methods for Mechanical Sciences* (M. S. Howe; 6th edition). A copy is on reserve in the Engineering Library; it can also be downloaded in pdf form from the ME 400 *Courseinfo* web site. Upper level undergraduates are expected to 'read around' the subject, and are recommended to consult textbooks such as those listed on page 5.

Course grading:

- 4 take-home examinations (12.5% each)

- final **closed book** examination (50%)

Coursework assistance:

- There will be a discussion class conducted by a teaching assistant; additional help will be given by the instructor during the last 30 minutes of each lecture

- Office hours arranged by appointment (by email)

Homework:

Homework will consist of four assignments that provide practice in applying techniques taught in class. Each assignment includes

- a take-home examination, consisting of a short **essay** and 10 problems

- non-graded problems that will form the basis of the class discussions (solutions will be posted on the ME 400 website after the due date)

Each take-home examination problem is graded out of 10 as follows: up to 7 points for obtaining the correct answer and showing all your working; up to 3 points for setting-out the answer in a neat and readable manner. The essay is graded out of 25.

You have at least **ONE WEEK** for each take-home examination; exam scripts are due at the end of class on the date specified.

IMPORTANT: The take-home exam work *must be your own.* You may discuss the content of a given problem, solution methods and approaches with classmates and the teaching assistant, but THE WORK YOU HAND IN MUST BE YOUR OWN. You are expected to formulate, analyze, and write essays and solutions by yourself. Copying work of another student or from other sources is cheating and will be not be tolerated.

The following illustrates how solutions should be set-out, and how you should include written explanations of your steps:

Question: Use the divergence theorem to evaluate $\oint_{\mathrm{S}} \mathbf{F}{\cdot}d\mathbf{S}$, where $\mathbf{F} = \frac{1}{3}(x^3, y^3, z^3)$ and S is the surface of the sphere $|\mathbf{x}| \leq R$.

Solution: To evaluate

$$I = \oint_{\mathrm{S}} \mathbf{F}{\cdot}d\mathbf{S}$$

where $\mathbf{F} = \frac{1}{3}(x^3, y^3, z^3)$ and S is the surface $|\mathbf{x}| = R$.

By the divergence theorem

$$I = \int_{\mathrm{V}} \mathrm{div}\,\mathbf{F}\,dV,$$

where the integration is over the volume V of the sphere, and

$$\mathrm{div}\,\mathbf{F} = \left(\frac{\partial F_1}{\partial x} + \frac{\partial F_2}{\partial y} + \frac{\partial F_3}{\partial z}\right) = \frac{1}{3}(3x^2 + 3y^2 + 3z^2) = r^2, \; r = \sqrt{x^2 + y^2 + z^2}.$$

Using spherical polar coordinates, and taking $dV = 4\pi r^2 dr$ (because the integrand is radially symmetric):

$$I \;=\; \int_{r<R} r^2 dV \;=\; \int_0^R 4\pi r^4 dr \;=\; \left[\frac{4\pi}{5}r^5\right]_0^R$$

$$\therefore \qquad I \;=\; \frac{4\pi}{5}R^5$$

SAMPLE ESSAY

Essay: Write a short essay (not more than two sides of paper) in which you give the definition of a vector field, define the *curl* of a vector field $\mathbf{F}(\mathbf{x})$, and state and prove Stokes' theorem.

A single valued vector function defined over a region of space is called a vector field. For example, the velocity vector in a fluid, and vector gravitational and electrical force distributions are vector fields.

The 'curl' of a vector field $\mathbf{F}(\mathbf{x})$ is a new vector field $\mathbf{curl\,F}$ whose value at $\mathbf{x}$ is determined by the following limiting procedure. For any fixed unit vector $\hat{\mathbf{a}}$, the component of $\mathbf{curl\,F}$ in the direction of $\hat{\mathbf{a}}$ is

$$\hat{\mathbf{a}} \cdot \mathbf{curl\,F} = \lim_{A \to 0} \frac{1}{A} \oint_C \mathbf{F} \cdot d\mathbf{r} \qquad (1)$$

where C is a closed contour enclosing $\mathbf{x}$ in the plane through $\mathbf{x}$ with normal $\hat{\mathbf{a}}$. C encloses an area A of the plane, and is traversed in the positive sense with respect to the direction $\hat{\mathbf{a}}$.

For rectangular coordinates $\mathbf{x} = (x, y, z)$, with unit vectors $\mathbf{i}$, $\mathbf{j}$, $\mathbf{k}$ respectively parallel to the x, y, and z directions, this definition yields

$$\mathbf{curl\,F} \equiv \nabla \times \mathbf{F} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ F_1 & F_2 & F_3 \end{vmatrix}$$

$$= \left(\frac{\partial F_3}{\partial y} - \frac{\partial F_2}{\partial z} \right) \mathbf{i} + \left(\frac{\partial F_1}{\partial z} - \frac{\partial F_3}{\partial x} \right) \mathbf{j} + \left(\frac{\partial F_2}{\partial x} - \frac{\partial F_1}{\partial y} \right) \mathbf{k},$$

where $\mathbf{F} = (F_1, F_2, F_3)$.

The definition (1) also leads to a direct proof of Stokes' theorem

$$\oint_C \mathbf{F} \cdot d\mathbf{r} = \int_S \mathbf{curl\,F} \cdot d\mathbf{S} \equiv \int_S \mathbf{n} \cdot \mathbf{curl\,F} \, dS,$$

where C is a closed contour, S an open, two-sided surface bounded by C, and the line integral is taken along C in the positive direction with respect to the unit normal $\mathbf{n}$ on S.

We can write $\oint_C \mathbf{F} \cdot d\mathbf{r} = \lim_{k \to \infty} \sum_k \oint_{C_k} \mathbf{F} \cdot d\mathbf{r}$, where the surface S is partitioned into infinitesimal elements of area δS_k with unit normal $\mathbf{n}_k$ and boundary C_k, because the integral along each section of C_k common to two adjacent elements enters twice, once for each element, but with opposite signs, and therefore makes no contribution to the sum. What remains is just the integral along those sections of the C_k that make up the contour C. The definition (1), with $\hat{\mathbf{a}} = \mathbf{n}_k$, then gives

$$\oint_C \mathbf{F} \cdot d\mathbf{r} = \lim_{k \to \infty} \sum_k \oint_{C_k} \mathbf{F} \cdot d\mathbf{r} = \lim_{k \to \infty} \sum_k \mathbf{n}_k \cdot \mathbf{curl\,F} \, \delta S_k = \int_S \mathbf{curl\,F} \cdot d\mathbf{S}. \quad \text{Q.E.D.}$$

Syllabus

During the course of the semester you are expected to read and understand the material in those sections of **MMMS**, 6th edition, indicated after each heading in the following syllabus:

1. Vector Calculus

Sections 2.1 - 2.5; Section 2.7.

Assignment 1: Take-home examination 1; Essay 1.

2. Complex Variable

Sections 3.1 - 3.10.

Assignment 2: Take-home examination 2; Essay 2.

3/4. Partial differential equations; Fourier series and transforms

Sections 1.9, 1.10, 1.11;

Sections 4.1 - 4.3, 4.6, 4.9, 4.10.

Assignment 3: Take-home examination 3; Essay 3.

Assignment 4: Take-home examination 4; Essay 4.

Alternative Texts: (*not* recommended for purchase):

Lopez, R. J. *Advanced Engineering Mathematics.* Addison Wesley.

Kreyszig, E. *Advanced Engineering Mathematics.* Wiley.

Greenberg, M. E. *Advanced Engineering Mathematics.* Prentice Hall.

Zill, D. G. and Cullen, M. R. *Advanced Engineering Mathematics.* Jones and Bertlett.

ASSIGNMENT 1

Problems 2A

1. Find the value of x given that $\mathbf{a} = 3\mathbf{i} - 2\mathbf{j}$ and $\mathbf{b} = 4\mathbf{i} + x\mathbf{j}$ are perpendicular. [6].

3. Solve for $\mathbf{x}$ the vector equation $\mathbf{x} + \mathbf{a}(\mathbf{b} \cdot \mathbf{x}) = \mathbf{c}$, where $\mathbf{a}$, $\mathbf{b}$, $\mathbf{c}$ are constant vectors. What happens when $\mathbf{a} \cdot \mathbf{b} = -1$? $[\mathbf{x} = \mathbf{c} - \mathbf{a}(\mathbf{b} \cdot \mathbf{c})/(1 + \mathbf{a} \cdot \mathbf{b})]$.

5. Solve the simultaneous equations $\mathbf{x} + \mathbf{y} \times \mathbf{p} = \mathbf{a}$, $\mathbf{y} + \mathbf{x} \times \mathbf{p} = \mathbf{b}$.
   $[\mathbf{x} = \{(\mathbf{p} \cdot \mathbf{a})\mathbf{p} + \mathbf{a} - \mathbf{b} \times \mathbf{p}\}/(1 + p^2), \quad \mathbf{y} = \{(\mathbf{p} \cdot \mathbf{b})\mathbf{p} + \mathbf{b} - \mathbf{a} \times \mathbf{p}\}/(1 + p^2)]$.

7. Show that $(\mathbf{a} \times \mathbf{b}) \cdot (\mathbf{a} \times \mathbf{c}) \times \mathbf{d} = (\mathbf{a} \cdot \mathbf{d})(\mathbf{a} \cdot \mathbf{b} \times \mathbf{c})$.

Problems 2B

Calculate the gradients of

1. $\varphi = x$ $[\mathbf{i}]$.

3. $\varphi = r^n$, $\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$. $[nr^{n-2}\mathbf{r}]$.

5. $\varphi = \mathbf{r} \cdot \nabla(x + y + z)$, $\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$. $[\mathbf{i} + \mathbf{j} + \mathbf{k}]$.

Find the directional derivatives in the direction of $\mathbf{a}$ of

7. $\varphi = e^x \cos y$, $\mathbf{a} = (2, 3, 0)$, $\mathbf{x} = (2, \pi, 0)$ $[-2e^2/\sqrt{13}]$.

Find the unit normal to the surfaces:

9. $z = \sqrt{x^2 + y^2}$ at $\mathbf{x} = (3, 4, 5)$ $[(3, 4, -5)/5\sqrt{2}]$.

Problems 2C

Find the divergence of

1. $\mathbf{F} = y\mathbf{i} + z\mathbf{j} + x\mathbf{k}$ $[0]$.

3. $\mathbf{F} = (x, y^2, z^3)$ $[1 + 2y + 3z^2]$.

5. $\mathbf{F} = xyz(\mathbf{i} + \mathbf{j} + \mathbf{k})$ $[yz + xz + xy]$.

7. $\mathbf{F} = \mathbf{r}(\mathbf{r} \cdot \mathbf{a})$, $\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$, $\mathbf{a} = $ constant. $[4\mathbf{r} \cdot \mathbf{a}]$.

Prove that

9. $\nabla^2(r^n) = n(n + 1)r^{n-2}$, $\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$.

11. $\text{div}(f\nabla g) - \text{div}(g\nabla f) = f\nabla^2 g - g\nabla^2 f$.

13. $V = \frac{1}{6} \oint_S \mathbf{n} \cdot \nabla(r^2) dS$, where $\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$ and V is the volume enclosed by S.

Evaluate $\oint_S \mathbf{n} \cdot \mathbf{F} dS$ when

15. $\mathbf{F} = (x, x^2 y, -x^2 z)$ and S is the surface of the tetrahedron with vertices $(0, 0, 0)$, $(1, 0, 0)$, $(0, 1, 0)$ $(0, 0, 1)$ $[\frac{1}{6}]$.

17. $\mathbf{F} = ax\mathbf{i} + by\mathbf{j} + cz\mathbf{k}$ where a, b, c are constants, and S is the unit sphere $|\mathbf{x}| = 1$ $[\frac{4}{3}\pi(a + b + c)]$.

Problems 2E

Evaluate the line integrals $\int_C \mathbf{F}\cdot d\mathbf{r}$:

1. $\mathbf{F} = (3x^4, 3y^6, 0)$ where C is the curve: $x^2 + y^2 = 4$, $z = 0$ from $(2,0,0)$ to $(-2,0,0)$ $[\frac{-192}{5}]$.

3. $\mathbf{F} = (e^x, e^{4y/x}, e^{2z/y})$ where C is $\mathbf{r} = (t, t^2, t^3)$, $0 < t < 1$ $[\frac{3}{8}e^4 + \frac{3}{4}e^2 + e - \frac{13}{8}]$.

Show that the following integral is path-independent and find the corresponding potential function:

5. $\int_C \left[y \cos xy \, dx + x \cos xy \, dy - dz \right]$, $[\varphi = \sin xy - z]$.

7. Show that if $\mathbf{r} = \mathbf{r}(t)$ on C, the *length of arc* between $t = a$ and $t = b$ is given by $\ell = \int_a^b |\dot{\mathbf{r}}(t)| dt$.

9. $\mathbf{r} = (a \cos \theta, \ a \sin \theta, \ a\theta \tan \alpha)$ on a helix, where a, α are constants. Show that the length of arc measured from $\theta = 0$ is given by $\ell = a\theta \sec \alpha$.

Problems 2F

Evaluate $\int_S \mathbf{F}\cdot d\mathbf{S}$:

1. $\mathbf{F} = (2x, 2y, 0)$ where S is the surface: $z = 2x + 3y$, $0 < x < 2$, $-1 < y < 1$, $[-16]$.

3. $\mathbf{F} = (1, x^2, xyz)$ where S is $z = xy$, $0 < x < y$, $0 < y < 1$, $[-\frac{59}{180}]$.

5. $\mathbf{F} = (2xy, x^2, 0)$ where S is $\mathbf{r} = (\cosh u, \sinh u, v)$, $0 < u < 2$, $-3 < v < 3$, $[2 \cosh^3 2 - 2]$.

7. $\mathbf{F} = (y^2, z^2, x^2 z)$ where S is the surface bounding the region $x^2 + y^2 \le 4$, $x \ge 0$, $y \ge 0$, $|z| \le 1$, $[2\pi]$.

Use Stokes's theorem to evaluate $\oint_C \mathbf{F}\cdot d\mathbf{r}$:

9. $\mathbf{F} = x^2 yz\mathbf{j}$ where C is the quadrilateral with vertices $(0, 1, 0)$, $(1, 1, 0)$, $(1, 0, 1)$, $(0, 0, 1)$ traversed in this order. $[-\frac{1}{6}]$.

11. $\mathbf{F} = xyz\mathbf{j}$ where C is the triangle with vertices $(1, 0, 0)$, $(0, 1, 0)$, $(0, 0, 1)$, $[0]$.

13. $\mathbf{F} = (-3y, 3x, z)$ where C is $x^2 + y^2 = 4$, $z = 1$, $[24\pi]$.

15. $\mathbf{F} = 2z\mathbf{i} + 4x\mathbf{j} + 5y\mathbf{k}$ where C is $x^2 + y^2 = 4$, $z - x = 4$, orientated anticlockwise when viewed from above. $[-4\pi]$.

ASSIGNMENT 2

Problems 3A

1. Express in the form $a + ib$:
   (i) $(2 + i)^2 + (2 - i)^2$;   (ii) $\frac{\alpha + \beta i}{\alpha - \beta i} - \frac{\alpha - \beta i}{\alpha + \beta i}$. $[6, \ 4i\alpha\beta/(\alpha^2 + \beta^2)]$.

3. Find the modulus and principal value of the argument of: $z = -1, \ i, \ 3 + 4i, \ -i - \sqrt{3}$.
   $[1, \ \pi; \ 1, \ \frac{\pi}{2}; \ 5, \ 0.927 \text{ radians}; \ 2, \ -\frac{5\pi}{6}]$.

5. Express $\sqrt{5 + 12i}, \ \sqrt{-5 + 12i}, \ \sqrt{i}$ in the form $a + ib$. $[\pm(3 + 2i), \ \pm(2 + 3i), \ \pm\frac{1}{\sqrt{2}}(1 + i)]$.

7. Find two real numbers $a, \ b$ such that $(1 + i)a + 2(1 - 2i)b - 3 = 0$. $[a = 2, \ b = \frac{1}{2}]$.

9. If $z_1, \ z_2, \ z_3$ are complex numbers, show that
   (i) $|z_1 + z_2|^2 + |z_1 - z_2|^2 = 2|z_1|^2 + 2|z_2|^2$
   (ii) $|2z_1 - z_2 - z_3|^2 + |2z_2 - z_3 - z_1|^2 + |2z_3 - z_1 - z_2|^2 = 3\{|z_2 - z_3|^2 + |z_3 - z_1|^2 + |z_1 - z_2|^2\}$

11. Show that

$$\frac{1 + \cos\theta + i\sin\theta}{1 - \cos\theta + i\sin\theta} = \cot\left(\frac{\theta}{2}\right) e^{i(\theta - \frac{\pi}{2})}.$$

Evaluate the roots:

13. $\sqrt[8]{1}$ $[\pm 1, \ \pm i, \ \pm(1 \pm i)/\sqrt{2}]$

15. $z^2 - (5 + i)z + 8 + i = 0$ $[z = 3 + 2i, \ 2 - i]$

Problems 3D Evaluate:

1. $\oint_{|z|=2} \frac{dz}{z+i}$ $[2\pi i]$.

3. $\oint_C \frac{dz}{z^2 - \frac{1}{4}}$ where C is the square with corners $\pm(1 \pm i)$ $[0]$.

5. $\oint_{|z - \frac{\pi}{2}|=1} \frac{\sin z \ dz}{\left(z^2 - \frac{\pi^2}{4}\right)}$ $[2i]$

7. $\oint_{|z| = \frac{3}{2}|a|} \frac{dz}{z - a}$. $[2\pi i]$.

9. $\oint_{|z| = 1} \frac{(2z - 3)dz}{z^2 - 3z}$. $[2\pi i]$.

Problems 3E

Evaluate the residues of:

1. $z \cosh(3/z)$. $[\frac{9}{2}$ at $z = 0]$.

3. $z^4/(z^2 + 1)$. $[-\frac{i}{2}$ at $z = i; \ \frac{i}{2}$ at $z = -i]$.

5. $\frac{\sin z}{z^4}$. $[-\frac{1}{6}$ at $z = 0]$.

7. $z^2 e^{\frac{1}{z}}$. $[\frac{1}{6}$ at $z = 0]$.

9. $(\cosh 2z)/z^5$. $[\frac{2}{3}$ at $z = 0]$.

Evaluate by the residue theorem (contours are traversed in the anticlockwise sense):

11. $\oint_{|z|=1} \frac{z^6+7}{z^2-2z} dz \quad [-7\pi i].$

13. $\oint_{|z|=1} \frac{\sinh z}{4z^2+1} dz \quad [\pi i \sin\left(\frac{1}{2}\right)].$

15. $\oint_{|z-\frac{i}{2}|=1} \frac{z^4}{z^2+1} dz \quad [\pi].$

17. $\oint_{|z-\frac{i}{2}|=1} \frac{1}{z^3(z-1)^2} dz \quad [6\pi i].$

19. $\oint_{|z|=\frac{3}{2}} e^{\frac{1}{z}}/(z-1)^2 \, dz \quad [0].$

Problems 3F

Evaluate by the residue theorem:

1. $\int_0^{2\pi} \frac{d\theta}{1+a\sin\theta}, \quad |a| < 1 \quad \left[\frac{2\pi}{\sqrt{1-a^2}}\right].$

3. $\int_0^{2\pi} \frac{\cos 2\theta \, d\theta}{1-2p\cos\theta+p^2}, \quad |p| < 1 \quad \left[\frac{2\pi p^2}{1-p^2}\right].$

5. $\int_0^{\pi} \frac{\sin^4\theta \, d\theta}{a+\cos\theta}, \quad a > 1, \quad \left[\pi\left(\frac{3}{2}a - a^3 + (a^2-1)^{\frac{3}{2}}\right)\right].$

7. $\int_0^{\infty} \frac{dx}{(1+x^2)(4+x^2)} \quad \left[\frac{\pi}{12}\right].$

11. $\int_0^{\infty} \frac{dx}{(1+x^2)^2} \quad \left[\frac{\pi}{4}\right].$

15. $\int_0^{\infty} \frac{x\sin 2x \, dx}{1+x^2} \quad \left[\frac{\pi}{2e^2}\right].$

17. $\fint_{-\infty}^{\infty} \frac{\cos kx \, dx}{x-a}, \quad (a, \ k \ \text{real}, \ k > 0) \quad [-\pi\sin ka].$

19. $\fint_{-\infty}^{\infty} \frac{dx}{x(x-ai)}, \quad (a > 0) \quad \left[\frac{\pi}{a}\right].$

ASSIGNMENT 3

Problems 1H

Find the eigenvalues and eigenfunctions of:

1. $y'' + \lambda y = 0$, $y(0) = 0$, $y'(1) = 0$ $[\lambda_n = \left(\frac{(2n+1)\pi}{2}\right)^2$, $n = 0,\ 1,\ 2,\dots$, $y_n = \sin(\sqrt{\lambda_n}x)]$.

2. $y'' + \lambda y = 0$, $y'(0) = 0$, $y'(\pi) = 0$ $[\lambda_n = n^2$, $n = 0,\ 1,\ 2,\dots$, $y_n = \cos(nx)]$.

3. Transform the equation $y'' + 2y' + (1 - \lambda)y = 0$, $(y(0) = 0,\ y(1) = 0)$ into Sturm-Liouville form by multiply-ing by e^{2x}. Calculate the eigenvalues and eigenfunctions and show that $\int_0^1 e^{2x}y_n(x)y_m(x)dx = 0$, $m \neq n$. $[\lambda_n = -n^2\pi^2$, $n = 1,\ 2,\ 3,\dots$, $y_n = e^{-x}\sin(n\pi x)]$.

Problems 4A

1. If

$$f(x) = \begin{cases} x, & 0 < x < \ell/2, \\ \ell - x, & \ell/2 < x < \ell, \end{cases}$$

in the boundary value problem for the diffusion equation (4.3.8), show that

$$u = \frac{4\ell}{\pi^2} \sum_{n=0}^{\infty} \frac{(-1)^n}{(2n+1)^2} \sin\left(\frac{(2n+1)\pi x}{\ell}\right) \exp\left(\frac{-(2n+1)^2\pi^2\kappa t}{\ell^2}\right), \quad t > 0.$$

3. When $f(x) = x$ in problem 2, deduce that

$$u = \frac{\ell}{2} - \frac{4\ell}{\pi^2} \sum_{n=0}^{\infty} \frac{\cos\left(\frac{(2n+1)\pi x}{\ell}\right) \exp\left(\frac{-(2n+1)^2\pi^2\kappa t}{\ell^2}\right)}{(2n+1)^2}, \quad t > 0.$$

5. Show that the solution of the *Dirichlet* problem for u:

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$$

in the rectangular domain $0 < x < a$, $0 < y < b$, where $u = 0$ on each side of the rectangle *except* that along the x-axis, where $u = f(x)$ $(0 < x < a,\ y = 0)$, can be expressed in the form

$$u = \sum_{n=1}^{\infty} A_n \sin\left(\frac{n\pi x}{a}\right) \sinh\left(\frac{n\pi(b-y)}{a}\right), \quad \text{where} \quad A_n = \frac{2}{a} \int_0^a \frac{f(x)\sin(n\pi x/a)\,dx}{\sinh(n\pi b/a)}.$$

7. Obtain all solutions of

$$\frac{\partial^2 u}{\partial x^2} - \frac{\partial u}{\partial y} = u$$

of the form $u(x,y) = (A\cos\lambda x + B\sin\lambda x)f(y)$, where A, B, λ are constants. Show that the particular solution that satisfies $u(0,y) = 0$, $u(\pi,y) = 0$, $u(x,1) = x$ $(0 < x < \pi)$ is given by

$$u = -2\sum_{n=1}^{\infty} \frac{(-1)^n}{n} e^{(1+n^2)(1-y)} \sin nx.$$

9. Show that

$$u(x,t) = \frac{1}{2}a - \frac{4a}{\pi^2} \sum_{n=0}^{\infty} \frac{\cos\{(2n+1)\pi x/a\}}{(2n+1)^2} \, \mathrm{e}^{-t[(2n+1)\pi/a]^2}$$

satisfies

$$\frac{\partial^2 u}{\partial x^2} = \frac{\partial u}{\partial t}, \quad \frac{\partial u}{\partial x}(\pm a, t) = 0, \quad u(x,0) = |x|, \ |x| < a.$$

11. Show that when the conditions of Problem 10 are replaced by (i) $u(0,t) = 1$ and $u(1,t) = 0$ for $t > 0$,
(ii) $u(x,0) = \cos(\frac{\pi}{2}x)$ for $0 \le x \le 1$,

$$u(x,t) = 1 - x + \frac{2}{\pi} \sum_{n=1}^{\infty} \frac{\sin n\pi x}{n(4n^2 - 1)} \, \mathrm{e}^{-n^2\pi^2 t}.$$

13. Show that the solution $u(x,y)$ of

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad 0 < x < \pi, \ 0 < y < \pi,$$

where $\partial u/\partial x = 0$ at $x = 0$ and $x = \pi$, $u(x,\pi) = 0$, and $u(x,0) = f(x)$, is given by

$$u = A_0 \frac{(\pi - y)}{2\pi} + \sum_{n=1}^{\infty} A_n \frac{\cos nx \sinh n(\pi - y)}{\sinh n\pi}, \quad A_n = \frac{2}{\pi} \int_0^{\pi} f(x) \cos nx \, dx.$$

15. If $u(x,t)$ satisfies

$$\frac{\partial^2 u}{\partial x^2} = \frac{\partial u}{\partial t}, \quad 0 < x < a, \ t > 0, \quad \text{subject to } u(0,t) = 0, \ \frac{\partial u}{\partial x}(a,t) = 0, \ u(x,0) = \sin^3\left(\frac{\pi x}{2a}\right),$$

show that

$$u(x,t) = \frac{3}{4} \sin\left(\frac{\pi x}{2a}\right) \mathrm{e}^{-\pi^2 t/4a^2} - \frac{1}{4} \sin\left(\frac{3\pi x}{2a}\right) \mathrm{e}^{-9\pi^2 t/4a^2}.$$

Problems 1J

Show that:

1. $\delta(x - y) = \delta(y - x)$.

3. If $xf(x) = 0$ for all values of x, then $f(x) = A\delta(x)$, where A is an arbitrary constant. $\left[\int_{-\infty}^{\infty} g(x)f(x)dx = \int_{-\infty}^{\infty} f(x)\left\{ x\left(\frac{g(x)-g(0)}{x}\right) + g(0) \right\} dx = 0 + g(0) \int_{-\infty}^{\infty} f(x)dx = \text{constant} \times g(0), \ \therefore \quad f(x) = \text{constant} \times \delta(x). \right]$

5. $F(x)\delta(x - a) = F(a)\delta(x - a)$.

7. $\frac{d}{dx} \mathrm{H}(f(x)) = \frac{df(x)}{dx} \delta(f(x))$.

9. $\frac{d^2 |x|}{dx^2} = 2\delta(x)$.

11. $\int_{-\infty}^{\infty} \delta^{(n)}(x - a)f(x)dx = (-1)^n f^{(n)}(a)$.

13. $\lim_{\epsilon \to 0} \frac{-2\epsilon x}{\pi(x^2 + \epsilon^2)^2} = \delta'(x)$.

ASSIGNMENT 4

Problems 4F

Verify the following Fourier transform pairs:

1. $f(x) = e^{-|x|}, \quad \hat{f}(k) = \dfrac{\sqrt{2}}{\sqrt{\pi}(1+k^2)}.$

3. $f(x) = e^{-ax^2}, \quad \hat{f}(k) = \dfrac{1}{\sqrt{2a}}e^{-k^2/4a}, \ a > 0.$

5. $f(x) = \delta(x), \quad \hat{f}(k) = \dfrac{1}{\sqrt{2\pi}}.$

7. $f(x) = \begin{cases} x, & 0 < x < a, \\ 0, & x > a, \end{cases} \quad \hat{f}_c(k) = \sqrt{\dfrac{2}{\pi}}\dfrac{[ka\sin ka + \cos ka - 1]}{k^2}.$

9. $f(x) = e^{-x}, \quad \hat{f}_s(k) = \sqrt{\dfrac{2}{\pi}}\dfrac{k}{1+k^2}.$

11. $f(x) = x^n e^{-ax}, \ n = \text{positive integer}, \ a > 0, \quad \hat{f}_s(k) = \sqrt{\dfrac{2}{\pi}}\dfrac{n!}{(k^2+a^2)^{n+1}}\text{Im}(a+ik)^{n+1}.$

13. $f(x) = e^{-ax} \ (a > 0), \quad \hat{f}_c(k) = \sqrt{\dfrac{2}{\pi}}\dfrac{a}{a^2+k^2}.$

15. $f(x) = \dfrac{e^{-ax}}{x} \ (a > 0), \quad \hat{f}_s(k) = \sqrt{\dfrac{2}{\pi}}\tan^{-1}\left(\dfrac{k}{a}\right).$

17. $f(x) = \cos(x^2/2), \quad \hat{f}_c(k) = \dfrac{1}{\sqrt{2}}\big(\cos(k^2/2) + \sin(k^2/2)\big).$

19. $f(x) = \dfrac{1}{x}, \quad \hat{f}_s(k) = \sqrt{\dfrac{\pi}{2}}.$

Problems 4G

1. The steady temperature distribution $u(x,y)$ in $x > 0, \ y > 0$ is governed by

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad \text{and} \quad \begin{cases} u = 0, \quad x = 0, \ 0 < y < \infty, \\ \partial u/\partial y = -\sigma\delta(x - a), \ (a > 0), \quad 0 < x < \infty, \ y = 0. \end{cases}$$

Use the sine transform to show that

$$u = \frac{\sigma}{2\pi}\ln\left(\frac{y^2 + (a+x)^2}{y^2 + (a-x)^2}\right), \quad x > 0, \ y > 0.$$

3. Show that the bounded solution of the boundary value problem

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad \text{and} \quad \begin{cases} u = 0, \quad x = 0, \ 0 < y < \infty, \\ u = u_0 x/(1+x^2), \quad 0 < x < \infty, \ y = 0. \end{cases}$$

is

$$u(x,y) = \frac{u_0 x}{(1+y)^2 + x^2} \equiv \text{Re}\left(\frac{u_0}{z+i}\right), \quad z = x + iy.$$

6. Find the function $u(x, y)$ that is bounded in $y > 0$ and satisfies

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad y > 0, \quad -\infty < x < \infty, \quad \text{and} \quad u = \delta(x - \xi) \quad \text{on} \quad y = 0. \quad \left[u = \frac{y}{\pi[(x - \xi)^2 + y^2]} \right]$$

7. If $u(x, y)$ is bounded in $y > 0$ and satisfies

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad y > 0, \quad -\infty < x < \infty, \quad \text{and} \quad u = f(x) \quad \text{on} \quad y = 0,$$

show that

$$u = \frac{y}{\pi} \int_{-\infty}^{\infty} \frac{f(\xi) \, d\xi}{[(x - \xi)^2 + y^2]}.$$

8. If $\nabla u(x, y)$ is bounded in $y > 0$ and satisfies

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad y > 0, \quad -\infty < x < \infty, \quad \text{and} \quad \frac{\partial u}{\partial y} = \delta(x - \xi) \quad \text{on} \quad y = 0,$$

show that

$$\nabla u = \frac{(x - \xi, \, y)}{\pi[(x - \xi)^2 + y^2]}, \quad u = \frac{1}{2\pi} \ln[(x - \xi)^2 + y^2] + \text{constant}, \quad y > 0.$$

9. If $\nabla u(x, y)$ is bounded in $y > 0$ and satisfies

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad y > 0, \quad -\infty < x < \infty, \quad \text{and} \quad \frac{\partial u}{\partial y} = f(x) \quad \text{on} \quad y = 0,$$

show that

$$u = \frac{1}{2\pi} \int_{-\infty}^{\infty} f(\xi) \ln[(x - \xi)^2 + y^2] \, d\xi + \text{constant}, \quad y > 0.$$

10. Use the cosine transform to show that, if $u(x, y)$ is bounded in $y > 0$ and satisfies

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad y > 0, \quad -\infty < x < \infty, \quad \text{and} \quad u = \mathrm{H}(a - |x|), \, a > 0, \quad \text{on} \quad y = 0,$$

then

$$u = \frac{1}{\pi} \left\{ \tan^{-1}\left(\frac{a + x}{y}\right) + \tan^{-1}\left(\frac{a - x}{y}\right) \right\}, \quad y > 0.$$

11. Show that the solution $u(x, y)$ of

$$
\begin{aligned}
\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} &= 0, \quad x > 0, \; 0 < y < a, \\
u(x, 0) &= f(x), \; 0 < x < \infty, \\
u(x, a) &= 0, \; 0 < x < \infty, \\
u(0, y) &= 0, \; 0 < y < a,
\end{aligned}
$$

is given by

$$u = \frac{2}{\pi} \int_0^{\infty} f(\xi) d\xi \int_0^{\infty} \frac{\sinh[k(a - y)]}{\sinh ka} \sin kx \sin k\xi \, dk.$$

12. If $u(x,t)$ is bounded and satisfies

$$
\begin{aligned}
\frac{\partial^2 u}{\partial x^2} &= \frac{\partial u}{\partial t}, \quad x > 0, \quad t > 0, \\
u(x,0) &= x\mathrm{e}^{-x^2/4}, \\
u(0,t) &= 0,
\end{aligned}
$$

$$
\text{show that} \qquad u = \frac{x}{(1+t)^{\frac{3}{2}}}\mathrm{e}^{-x^2/4(1+t)}.
$$

Time: 20 minutes

1. Evaluate $\int_0^{\frac{\pi}{2}} \cos^4 x \sin 2x \, dx$.   [Ans. $\frac{1}{3}$]

2. Evaluate $\int_V \{(x^2 + y^2 + z^2)^{\frac{1}{2}} + 3x^2\} \, dxdydz$ where V is the sphere $x^2 + y^2 + z^2 = R^2$.
    $[\pi R^4 + \frac{4\pi}{5} R^5]$

3. Evaluate $\int_0^1 dy \int_{y-1}^{1-y} ydx$. $[\frac{1}{3}]$

4. Find the general solution of $d^2y/dx^2 + k^2 y = 2x$, where $k > 0$ is constant.
    $[y = A \cos kx + B \sin kx + 2x/k^2]$

5. Solve $dy/dx + x^3 y = 0$, given that $y = 1$ when $x = 1$. $\left[y = e^{\frac{1}{4}(1-x^4)}\right]$

6. Evaluate $\dfrac{d}{dx}\left(\dfrac{\tan x}{1+x}\right)$. $\left[\dfrac{\sec^2 x}{1+x} - \dfrac{\tan x}{(1+x)^2}\right]$

7. Evaluate $\lim\limits_{x \to 0} \dfrac{\sin^4 x}{(e^x - 1 - x)^2}$.   [4]

ME 400 Engineering Mathematics

ENG MATH! – WHY BOTHER?

- An 'educated' engineer must be familiar with the language of engineering science

- "Oh, I was never any good at math . . ."
  A modern day cliché that really means you're not fully rounded and certainly not a rounded engineer.
  Would you trust a doctor who didn't understand the fundamentals?

- "But we never need this stuff . . . , it's not used in other courses. . . "

  – Much of the material in ME400 *is* used in other upper level courses

  – The other material *will* be useful in your future career (at a minimum it will help you to read and understand technical reports and papers)

  – It's essential for the 20% of undergrads that go on to grad school

- "A lot of this stuff has no physical motivation . . ."

  Unfortunately it is impossible to present *every* new math topic as the solution of some practical problem that you're already familiar with, but the chosen topics have been found by experience to be important for engineers

- "But it's irrelevant, we have *Matlab* and fast computers . . ."

  – True, if you're not breaking new ground: *Matlab* can do what's known, but you need to understand its algorithms to have confidence in new results

  – Even the fastest computers can't solve some surprisingly simple problems in a timely manner, so that analytical modeling becomes essential

  – It is said that 'a picture is worth a thousand words'. For an engineer or scientist 'a formula is worth a thousand numerical simulations!'

- Feedback from graduate engineers overwhelmingly confirms the advantages of having taken ME400.

- Typically you won't leave BU with a confident and full understanding of everything in ME400 – however you will have been *exposed* to important methods, and when necessary will know where to look for the relevant information

REVIEW TOPICS

VECTOR CALCULUS

Vector algebra, applications to geometry, simple linear equations (MMMS: §2.1)

Scalar and vector fields, div, grad and curl (§§2.2 - 2.4)

Divergence theorem, Stokes theorem (§2.4)

Green's identities (§2.5)

How to evaluate line and surface integrals (§2.7)

COMPLEX VARIABLES

Algebra of complex numbers (§3.1)

Functions of a complex variable, definition of derivative (§3.2)

Cauchy-Riemann equations (§3.2)

Integration in the complex plane (§3.3)

Cauchy's theorem (§3.4)

Taylor and Laurent expansions (§§3.5 - 3.7)

Poles, residue theorem (§§3.8, 3.9)

Applications to evaluate simple trig and infinite integrals (§3.10)

Principal value integrals, Fourier integrals (§3.10)

The ML-theorem (§3.3)

PARTIAL DIFFERENTIAL EQUATIONS

Well posed problems (§4.2)

D'Alembert's solution of the wave equation (§4.1)

Method of separation of variables (§4.3)

Sturm-Liouville equation, eigenvalues and eigenfunctions (§1.9)

Eigenfunction expansions (generalized Fourier series) (§§1.9, 4.3)

Dirac delta function, Heaviside and sgn functions, and their derivatives, ϵ-sequences (§1.11)

Use of $e^{-\epsilon|x|}$ and $e^{-\epsilon x}$ (§§1.11, 4.9, 4.10)

Fourier, Sine and Cosine transforms, inversion formulae (§4.9)
