This course is an introduction to the foundations and design of computer networks, at an advanced undergraduate level. We expect to cover the following topics:

**Networking Foundations**: Network elements and architectures, packet and circuit switching, performance measures (delay, throughput), OSI and TCP/IP protocol suites, layering.

**Applications**: World Wide Web (HTTP), the domain name system (DNS), E-mail (SMTP), Internet socket programming.

**Transport Protocols and Reliable Data Transfer**: Connectionless transport: UDP, Connection-oriented transport: reliable transfer, sliding window protocols (Stop & Wait, Go-Back-N, Selective Repeat), TCP, congestion control, time-out computation.

**Internetworking**: Internet protocol (IP), IP addressing, subnetting, forwarding, routing algorithms (Dijkstra, Bellman-Ford), distance-vector routing, link-state routing.

**Link Layer, LANs, and MAC Protocols**: Framing, error detection and correction, multiple access protocols, Aloha, CSMA, Ethernet (IEEE 802.3), Ethernet switches, address resolution protocol (ARP).

**Advanced Topics**: Software-defined networking, peer-to-peer networks, wireless LANs (IEEE 802.11).

**Networking Tools**: Wireshark, Python sockets, Mininet, OpenFlow, ping, traceroute, nslookup, ipconfig, iPerf.
