Join United for Medical Research

for a look at the

Amazing Things that NIH-funded research makes possible

with remarks by

House Appropriations Subcommittee Chairman Mike Simpson, Chairman Fred Upton and Congresswoman Jackie Speier

Wednesday, November 15
2:00-3:15pm
Room G 2007 Rayburn House Office Building
RSVP by Nov. 14 to umr@hudsonlake.com
Light Refreshments Provided

The panel discussion will include four NIH-funded researchers whose ground-breaking discoveries and personal stories have been featured on the Amazing Things Podcast series:

**Ed Damiano, Boston University**
Dr. Damiano has developed a bionic pancreas for people with type 1 diabetes (link).

**Natalia Trayanova, Johns Hopkins University** - Dr. Trayanova has developed a computational model – a virtual heart – to prevent sudden cardiac death (link).

**Li-Huei Tsai, MIT**
Dr. Tsai’s research may lead to a new, light-based treatment for Alzheimer’s disease (link).

**Vadim Backman, Northwestern University** - Dr. Backman has developed a low-cost minimally invasive universal cancer test (link).

The discussion will be moderated by Amazing Things Podcast host Adam Belmar.

United for Medical Research is a coalition of leading research institutions, patient and health advocates, and private industry that have joined together to seek steady increases in funding for the National Institutes of Health. Learn more at www.unitedformedicalresearch.com

The Amazing Things podcasts are available at www.AmazingThingsPodcast.com as well as on iTunes and Stitcher. Fact sheets on the innovations and the role of NIH research funding are available on the Amazing Things website.
