

## TO MAKE A ROLLING TREBUCHET

The trebuchet can be left as it is, or the wheels can be added. To add the wheels, take out the four wheels, two 8" axle dowels, and four small dowels. Put the 8" dowels through the holes in the base beams, put on the wheels, and put the small dowels through the holes in the ends of the 8" dowels to hold the wheels in place.

CONGRATULATIONS, YOU'VE MADE A TREBUCHET!
