

BU Community Gardens

Project Overview

The BU Community Garden at Warren Towers was first created in 2021 through CCL funding. The goal of the project was to provide locally grown produce to the community and get students involved with urban agriculture. Since conception we have expanded every year, and now have four locations where we garden. Last semester, we became a club through SAO and now have regular meetings open to the public in addition to other tours and events.

With our latest round of funding in Summer 2023, we purchased a greenhouse as well as garden supplies such as soil and a new hose.
