

# ARTIFICIAL INTELLIGENCE

**Hansika Kommanavancha | Katherine Martin | Audrey Creighton**

# WHAT IS ARTIFICIAL INTELLIGENCE (AI)?

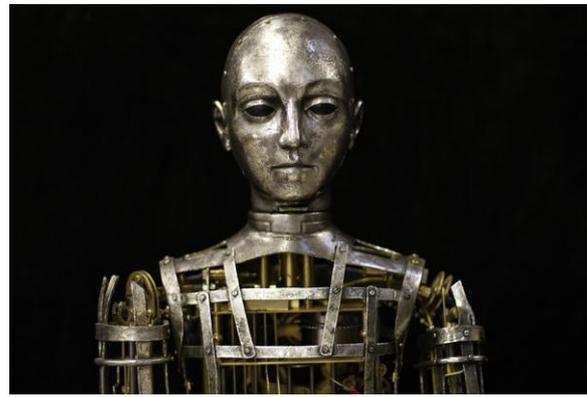

- The ability of a computer or computer-controlled robot to perform tasks normally associated with humans
  - Ability to reason
  - Discover meaning
  - Generalize knowledge
  - Learn from past experiences
  - Problem solve
- To think and act like humans

# A BRIEF HISTORY OF AI

- Founded in 1956 at Dartmouth College
- Got off to a slow start but really took off at the end of the 20th century
- Turing test made by Alan Turing in 1950
  - Test whether a computer can convincingly act like a human
  - People don't think it works anymore

# AI TODAY

- Artificial intelligence (AI) makes it possible for machines to:
  - learn from experience
  - adjust to new inputs
  - perform human-like tasks.
- Current day examples:
  - Siri, Alexa, and Google Home
  - Commercial flights use AI autopilot
  - Cleaning and labor robots

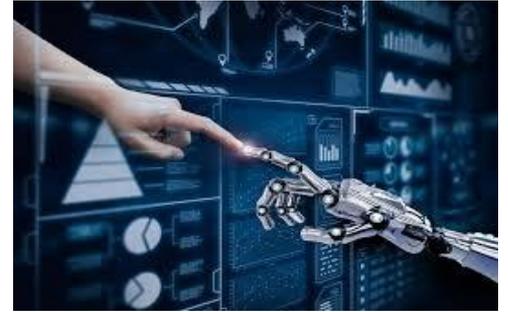

# AI IN THE FUTURE

The future of AI is everywhere:

- Manufacturing , Customer Service, Healthcare, Education

People are hoping that there will be robots who:

- Act and make decisions like humans
- Can mingle with humans and help others in need
- Can take on human jobs and labor work

# PROS & CONS

<b>PROS</b>	<b>CONS</b>
Doesn't tire quickly	High cost
Fast decision maker	Cannot think creatively
Reduces room for human error	Unemployment rates increase

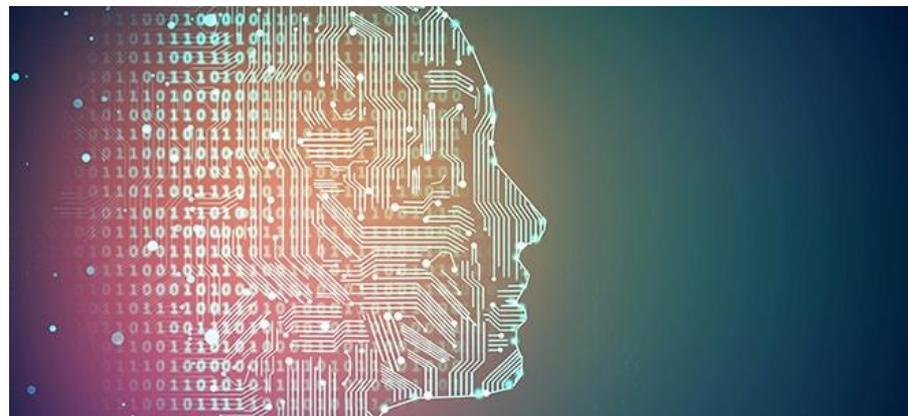

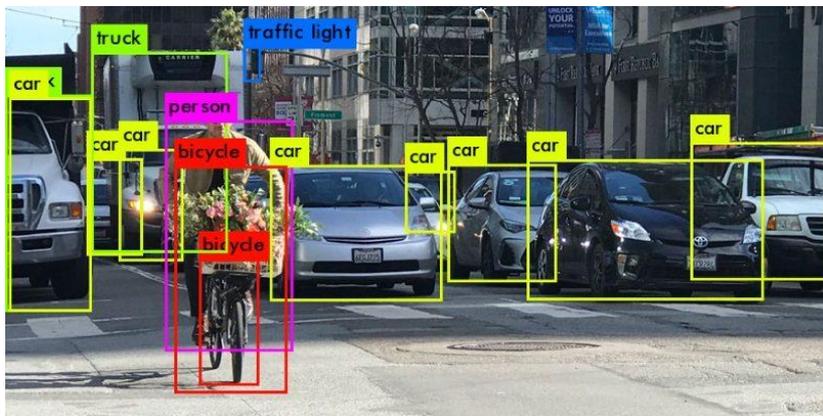

# AI IN THE HEALTHCARE INDUSTRY

- Diagnosing Diseases
- Working with contagious patients
- Automating administrative tasks

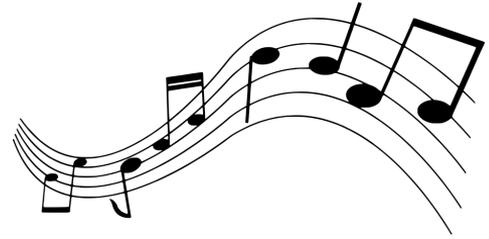

# IMAGE RECOGNITION

- Seeing and understanding
- Researchers feed the computer images
- Driverless cars

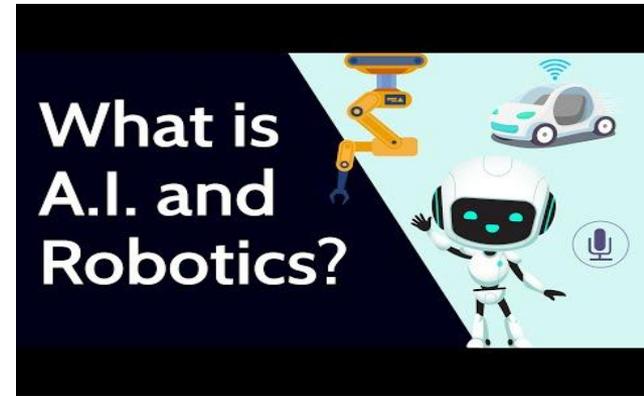

# NEUROSCIENCE WITH MUSIC

- Therapeutic method used to calm the brain
- Stimulates brain waves and patterns
- **How can music be used with AI?**
  - Create device representing human brain
  - Observe how music affects brain waves and patterns
  - Use as cure for illnesses

# AI LINKED WITH ROBOTICS

- **What is a robot?**
  - A machine able to perform a complex series of actions automatically
    - Programmable by computers
    - Help us complete tasks efficiently
- **Why use AI with robotics?**
  - Assembly
  - Packaging
  - Customer Service

# CURRENT PROJECTS WITH AI

- **Tesla**
  - Autopilot feature
  - Predictive capability of its self-driving system
- **Alexa**
  - Interacts with human questions
- **Netflix**
  - Uses alarmingly accurate predictions to deliver more relevant and appealing content to viewers
    - Analyzes past behaviour, viewed content, and customer reactions to movies and shows.
    - After clicking the “thumbs up” icon after watching something on Netflix, AI registers reaction
- **Amazon**
  - Looks at items you have searched for before to provide advertisements for things you might be interested in or might need with your current purchase

IN CONCLUSION...

THANK YOU!
