Lecture 20 CH102 A2 (MWF 11:15 am)

Monday, March 18, 2019

- Review: $[\text{H}_3\text{O}^+]$ when “just enough” base added
- $[\text{H}_3\text{O}^+]$ when “too much” base added;
- How much strong acid remains unreacted?

Next: Titration: Adding successive amounts of base; Practice: Too little, just enough, too much?; $[\text{H}_3\text{O}^+]$ when different amounts of “not enough” base added

Unreacted strong acid

Strong acids have $K_a \gg 1$ and so react with water with **nearly** 100% yield.

However, there must always be **some** unreacted acid.

Let's see how to calculate the molarity of unreacted acid.

18

Lecture 20 CH102 A2 (MWF 11:15 am) Spring 2019
