ARPAS: FEDERAL INTEREST AND OUTLOOK

Lewis-Burke Associates LLC October 13, 2022

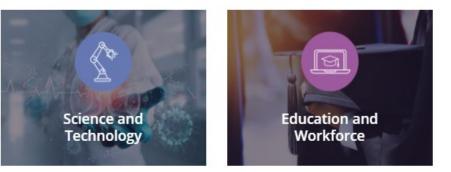

OVERVIEW OF TODAY'S SESSION

- Introductions to Lewis-Burke
- Overview of ARPAs across the Federal Government
- DARPA
- ARPA-E
- ARPA-H
- Q&A

ABOUT LEWIS-BURKE

Government Relations for Research, Healthcare, and Education

- Founded in 1992; located in Washington, DC
- 38 policy experts with range of expertise/backgrounds allow multi-layered issue teams with deep expertise in agencies and scientific/higher education areas
- Support federal relations activities to develop and implement federal strategies to pursue, shape, and create new sources of funding to increase and diversify research portfolio
- Able to engage on multiple levels:
 - Individual faculty (including early career faculty)
 - Teams of faculty
 - Deans and Center Directors
 - University leadership and campus-wide priorities/activities

OVERVIEW OF ARPAS

Key attributes of each Advanced Research Project Agency (ARPA), despite different agency missions:

- Funding high-risk, high-reward research (using broad, flexible mechanisms) that translates scientific discoveries and cutting-edge inventions into technological innovations;
- Accelerating transformational technological advances in areas industry alone will not undertake;
- Recruiting world-class talent through designated hiring authority and additional flexibilities;
- Empowering program managers to initiate and run programs of their own creation;
- Bringing in fresh ideas by rotating program managers and other key personnel every three to four years.

ARPAS IN THE FEDERAL GOVERNMENT

- DOD's Defense Advanced Research Projects Agency (DARPA), founded in 1958
 - DARPA's goal is to protect national security and stay on the forefront of military superiority
 - DARPA is a \$3 billion agency, investing in game-changing technologies and translating fundamental research and early prototypes into new strategic opportunities for national security applications
- DOE's Advanced Research Projects Agency-Energy (ARPA-E), founded in 2009
 - ARPA-E's goal is to overcome barriers in the development and deployment of energy technologies
 - ARPA-E has provided close to \$3 billion in research and development funding to 1,270 technology projects, which subsequently led to the creation of 109 new energy companies
- NIH's Advanced Research Projects Agency for Health (ARPA-H), founded in 2022
 - ARPA-H's goal is to drive transformational innovation in health research"
 - ARPA-H received \$1 billion from Congress for initial funding
- Homeland Security Advanced Research Projects Agency (HSARPA), founded in 2002
- Intelligence Advanced Research Projects Agency (IARPA), founded in 2006
- Agricultural Advanced Research and Development Authority (AGARDA), authorized in 2018
- Advanced Research Projects Agency Infrastructure (ARPA-I), authorized in 2021
- Advanced Research Projects Agency Climate (ARPA-C), proposed in 2021

DEFENSE ADVANCED RESEARCH PROJECTS AGENCY

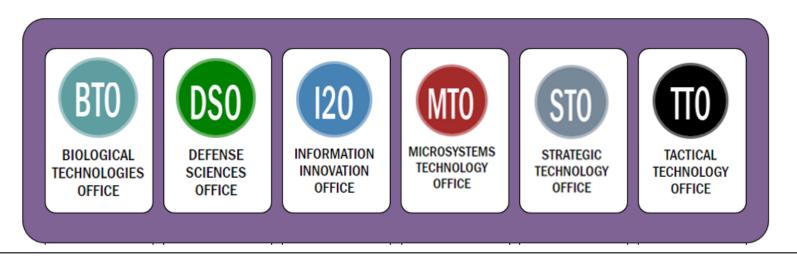

Background:

- First ARPA at Department of Defense (DOD) launched in 1957 in response to the Soviet Union's launch of Sputnik
- DARPA is associated with successful programs that made possible the Internet, GPS, and stealth aircraft
- Brings together industry, academia, and government partners
- President's budget request proposes \$4 billion in FY 2023 for DARPA; generally funded at \$3 billion

Mission:

- "Make pivotal investments in breakthrough technologies for national security"
- Transformational change, NOT incremental advances

DARPA ENGAGEMENT

Program Managers serve 3-5 year rotations

- Relatively flat organization of Director, Deputy Director, and Program Managers (PMs)
- Backgrounds in academia and/or industry
- PMs have full autonomy to propose research programs
- Engage early in tenure to shape opportunities

Opportunities to engage

- DARPA Offices issue broad agency announcements (BAAs) as well as specific program solicitations (FOAs)
- Frequently hosts "Proposers Days" to familiarize researchers with program goals
- DARPA Forward and new "<u>DARPA Innovation Fellowship Program</u>" to recruit early career scientists and engineers for two-year positions
- Annual <u>Young Faculty Award (</u>YFA) program

DARPA ENGAGEMENT

Best Practices

- Be prepared to adapt you research to meet PM's goals
- Have more than one idea to propose
- Submit "optional" white papers/abstracts to get feedback
- Attend proposers' days to find teaming opportunities and meet with PMs

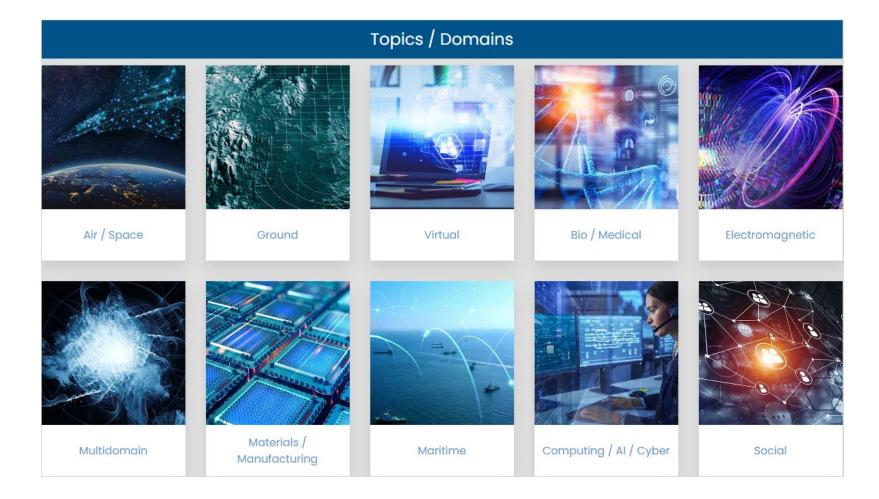

Proposals must align with the <u>Heilmeier Questions</u>:

- "What are you trying to do? Articulate your objectives using absolutely no jargon
- How is it done today, and what are the limits of current practice?
- What is new in your approach and why do you think it will be successful?
- Who cares? If you are successful, what difference will it make?
- What are the risks?
- How much will it cost?
- How long will it take?
- What are the mid-term and final "exams" to check for success?"

DARPA ENGAGEMENT

DARPA FORWARD

- Six Regional Events that aim to connect DARPA leaders with "new communities of talent and partnerships."
- Upcoming events: Atlanta, GA Oct 25-26; College Station, TX – Nov 15-16; San Diego, CA (Dec 13-14)
- Topics vary by event
- Recent announcements at DARPA Forward events:
 - New Innovation Fellowships
 - *New* Advanced Research Concepts
 - **New** Bridges Small Business Innovation
- More at <u>https://forward.darpa.mil/</u>.

ADVANCED RESEARCH PROJECTS AGENCY - ENERGY

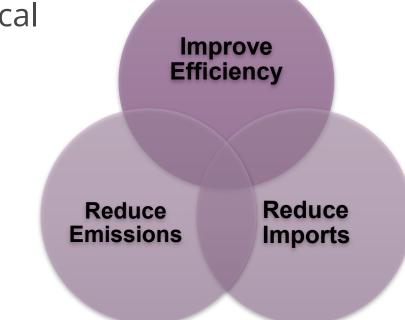

Mission: To overcome long-term and high-risk technological barriers in the development of energy technologies

Goals: Ensure America's

- Economic Security
- Energy Security
- Technological Lead in Advanced Energy Technologies

Means:

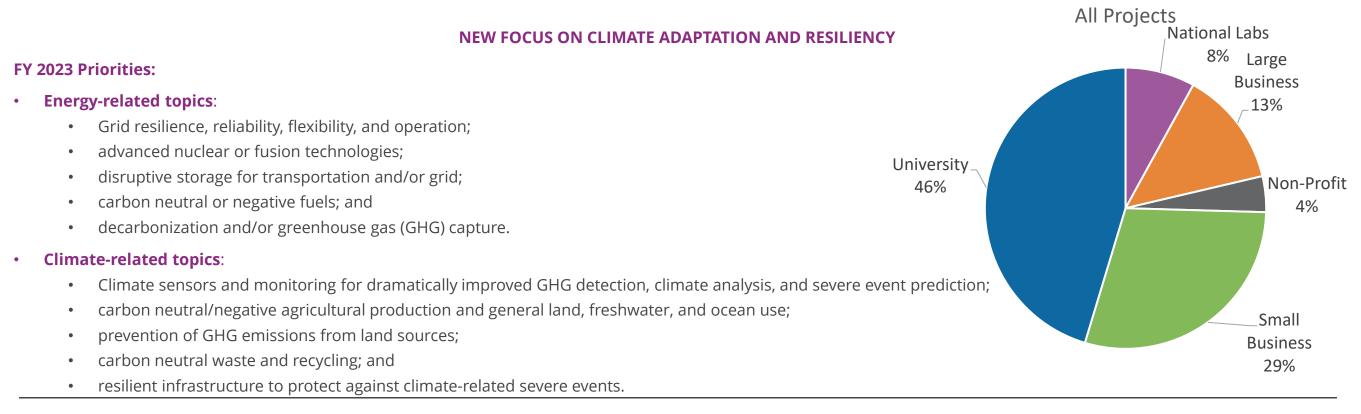

- Identify and promote revolutionary advances in fundamental and applied sciences
- Translate scientific discoveries and cutting-edge inventions into technological innovations
- Accelerate transformational technological advances in areas that industry by itself is not likely to undertake because of technical and financial uncertainty

ARPA-E PRIORITIES

FY 2022 Funding Calls:

- Zero emission iron and steelmaking: technologies to eliminate greenhouse gas emissions from the production of iron and steel
- Low-energy nuclear reactions
- High-energy, fast charging batteries for EV applications
- High efficiency cooling methods for new and existing data centers
- **Reactive carbon capture:** technology approaches for inexpensive conversion of diffuse or point-source CO2 to high-value chemical intermediates and/or fuel products.

Lewis-Burke Associates LLC

ARPA-E ENGAGEMENT

Program Directors serve 3-year terms and want to meet with stakeholders early in their tenure

- Perform technical deep dive soliciting input from multiple stakeholders
- Present & defend program concept in climate of constructive criticism
- Actively manage portfolio projects from merit reviews through project completion
- Develop milestones and work "hands-on" with awardees in value delivery

Opportunities for Engagement

- ARPA-E Energy Innovation Summit
- Topically focused workshops
- Reach out to program managers and build relationships

ARPA-H: BACKGROUND & CURRENT STATUS

CURRENT BIOMEDICAL RESEARCH ECOSYSTEM

Fundamental Research

- Performed in university, nonprofit, government labs
- Funded mostly by federal government
- Pursues important fundamental questions
- Major progress in discovering molecular and cellular mechanisms underlying health and disease
- Produces knowledge available to all
- Every new FDA approved therapeutic can be traced (in part) to NIH-supported discoveries

Commercial Sector

- Focused largely on research, development, and marketing of specific products to bring highly sophisticated therapies and devices to patients
- Access to significant capital to develop products, provided they can generate sufficient profit
- Currently, more than 8,000 medicines in development, including 1,300 for cancer

GAPS AND OPPORTUNITIES IN THE CURRENT SYSTEM

- Some ideas for biomedical innovations don't fit well into the current ecosystem:
 - Risk (actual or perceived) is too high
 - Cost is too large
 - Timeframe is too long
 - Focus is too applied for academia
 - Need for complex coordination among multiple stakeholders
 - Near-term market opportunity is too small to justify investment
 - Goal is too broad for one company to do and fund alone
- Interest in bringing the government's bold, fast, ambitious approach to COVID-19 (e.g. rapid development of vaccines, diagnostics, therapies) into other aspects of health and medicine

PRESIDENT BIDEN DRIVING FORCE BEHIND ARPA-H

- FY 2022 President's Budget Request included \$6.5 billion over three years to create ARPA-H within NIH
- ARPA-H would "drive transformational innovation in health research" by:
 - "Tackling bold challenges requiring large scale, sustained, cross-sector coordination
 - Creating new capabilities (e.g., technologies, data resources, disease models)
 - Supporting high-risk exploration that could establish entirely new paradigms
 - Overcoming market failures through critical solutions, including financial incentives"
- Initial focus on cancer, Alzheimer's disease, and diabetes and application of Rapid Acceleration of Diagnostics (RADx) "innovation funnel" model
- Flat and nimble organizational structure, autonomy for program managers, and milestonebased contracting mechanisms for funding (e.g. Other Transaction Authority)

ARPA-H FUNDING

The FY 2022 omnibus appropriations package, passed in March 2022, included \$1 billion for ARPA-H, available through FY 2024

- Final funding amount lower than levels proposed by both the House (\$3 billion) and the Senate (\$2.4 billion) in their individual appropriations bills
- Congress placed \$1 billion for ARPA-H within the larger HHS budget but gave HHS Secretary Xavier Becerra transfer authority to move these funds into NIH
 - Funds were transferred in late April 2022, making ARPA-H officially part of NIH
 - Secretary Becerra indicated that ARPA-H Director will report to him rather than NIH Director
- Congressional views towards ARPA-H captured in report language accompanying omnibus:
 - Support for ARPA-H concept in general, but some hesitancy about what exactly ARPA-H will do and how it will work
 - ARPA-H must be able to develop a unique culture and approach to selecting and funding projects
 - NIH should review any "duplication or misalignment of programs" once ARPA-H is established and report on any proposed shifts or reorganization to address such issues

ESTABLISHING ARPA-H

Where are we now?

CURRENT ARPA-H LEADERSHIP

HOW WILL ARPA-H WORK?

Program Manager Centric Responsible for programs from proposal to transition

Mission-Driven Not requirement- or task-driven

Lean, Nimble Organization Relatively small-sized; limited hierarchy **Independent and Autonomous** Top-level support and cover

High Uncertainty-High Return "ARPA hard"; demonstrates possibility; failure is accepted

Active Program Management Quantitative metrics

Time-Bound and Urgent Programs *and* PMs have start and end dates **Accountability** Technical gates; stage-gating

ARPA·H

2

Every decision at ARPA-H is informed by the "Heilmeier Questions"

HEILMEIER QUESTIONS (ARPA-H'S VERSION)

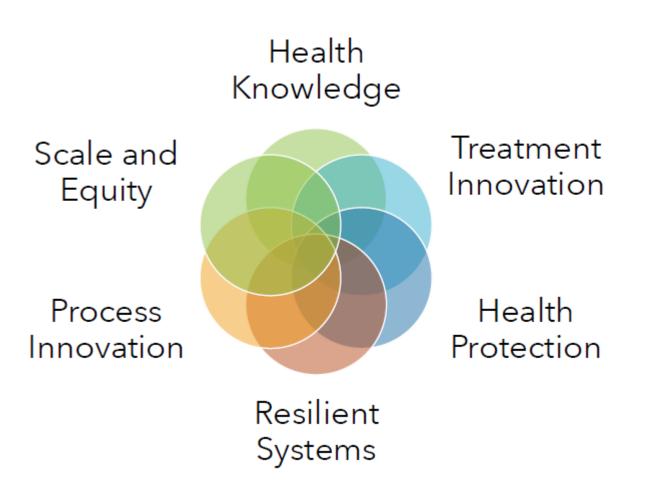

- 1) What problem are we trying to solve?
- 2) How does this get done at present? Who does it? What are the limitations of present approaches?
- 3) What is new about our approach? Why do we think we can be successful at this time?
- 4) Who cares? If we succeed, what difference will it make? *How can we help ensure outcomes are equitable?**
- 5) What are the risks?
- 6) How long will it take?
- 7) How much will it cost?
- 8) What are our mid-term and final exams to check for success?

*New for ARPA-H

https://dpcpsi.nih.gov/sites/default/files/Day-2-1145AM-ARPA-H-Russell.pdf

WHAT WILL ARPA-H FUND?

- Program managers will have significant freedom to develop their own portfolios and pursue the challenges they find most exciting
- Acting Deputy Director Russell has suggested that the gaps between major "levers" within health might be initial points of interest

WHAT'S NEXT?

FUTURE PROSPECTS FOR ARPA-H

- Timeline for staff hiring and funding opportunities remains unclear and ambitious:
 - Program manager recruitment should commence soon, now that Dr. Wegrzyn has been announced as inaugural Director
 - NIH projected that ARPA-H's first Broad Agency Announcement would be released in fall 2022, with first funding awarded in March 2023
- Funding for ARPA-H vs. funding for NIH base budget already point of tension in FY 2023 appropriations conversations
 - FY 2023 President's budget request included \$4 billion increase for ARPA-H and essentially flat funding for rest of NIH
- Expect ARPA-H to be discussed as nominee for the next NIH Director (yet to be named) is considered in the Senate

PREPARING TO COMPETE FOR ARPA-H FUNDING

- **Evaluate internal teams** what projects, centers, or groups might be well-positioned to compete for ARPA-H funding? How can these partnerships be strengthened now in advance of funding opportunities being released?
- **Review existing external partnerships** that might be valuable to highlight in a proposal for ARPA-H funding, especially those with industry partners and Minority-Serving Institutions
- Consider how to re-frame NIH-funded work in the context of ARPA-H, which will require a different lens than the standard NIH process. Work on answering ARPA-H's Heilmeier questions for any projects you would want to propose to the new agency
- **Consult with DARPA-funded colleagues** to get their perspectives on best practices in applying for funding. Faculty who have been successful at winning DARPA funding could provide advice, guidance, and/or mentoring to faculty who have not been funded through that agency
- Be prepared to engage formally with ARPA-H (through workshops, roadshows, etc.) as well as oneon-one with program managers once they are brought on board
- Look for updates from Lewis-Burke as ARPA-H continues to take shape

BACKUP SLIDES

PRESIDENT BIDEN'S INTEREST IN ARPA-H

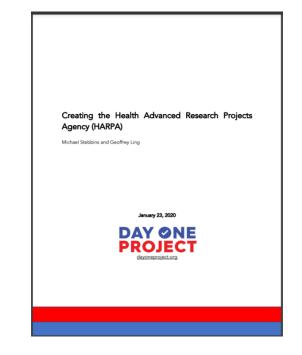

The Biden Administration's plan for ARPA-H was influenced by the President's strong personal interest in cancer research and proposals from the community dating back to at least 2016.

Congress authorized the creation of NIH's Cancer Moonshot in 2016 as part of the 21st Century Cures Act.

The Suzanne Wright Foundation has been advocating for the creation of a Health Advanced Research Projects Agency (HARPA) since 2017.

The Day One Project included creation of a HARPA among its many science and technology policy proposals for a new Administration in 2020.

CONGRESSIONAL INTEREST

Several proposals are currently under consideration in the House and the Senate to officially authorize the creation of ARPA-H and set direction for the agency.

Bill	Sponsors	Structure	Authorized Funding	Location	Director	Status
S. 3799 (PREVENT Pandemics Act)	Murray (D-WA) Burr (R-NC)	Part of NIH	Such sums as necessary for FY 2023 – FY 2027	Outside DC area	Four-year presidential appointee	Passed out of full committee
H.R. 5585 (ARPA-H Act)	Eshoo (D-CA)	Within HHS	\$500 million/year in FY 2023 – FY 2027	Not on any part of NIH campus	Five-year presidential appointee	Passed House

STAKEHOLDER REACTIONS

PERSPECTIVES FROM THE SCIENCE COMMUNITY

- Individual researchers:
 - Excitement about a new potential funding source, especially for riskier projects
 - Concern about "the rich getting richer" already well-funded investigators may be better positioned to compete for ARPA-H funding
- Universities and research institutions:
 - Leadership interested in prestige and boost to sponsored research numbers that additional ARPA-H funding could bring
 - Research administrators concerned about logistics of working with a different type of funder (e.g., processing contracts, meeting milestones)
- Scientific societies and advocacy groups:
 - Cautious optimism interest in potential for ARPA-H to advance biomedical research at large but concerns about competition with other core policy priorities (e.g. growing the NIH base budget)
 - Interest in pushing for discipline- or disease-specific priorities to be included in authorization and planning for ARPA-H (e.g. ALS advocacy)

WHERE WILL ARPA-H HAVE ITS HEADQUARTERS?

CHALLENGES TO CREATING ARPA-H

KEY QUESTIONS AND CHALLENGES FOR ARPA-H

- How do you ensure that ARPA-H can develop the unique culture it needs to be successful?
 - Need to encourage attributes (e.g. risk taking, acceptance of failure, milestonebased approaches) that NIH is traditionally uncomfortable with
- What will the impacts of ARPA-H be on the NIH budget (in FY 2023 and beyond)?
- How do you get buy-in from the biomedical research community?
- How will ARPA-H balance disease-agnostic platform technologies with more clinically oriented projects?
 - Will health care issues, health system design, supply chain challenges, etc. be within scope?
- How quickly can ARPA-H get going and prove its value?

KEY QUESTIONS AND CHALLENGES FOR ARPA-H

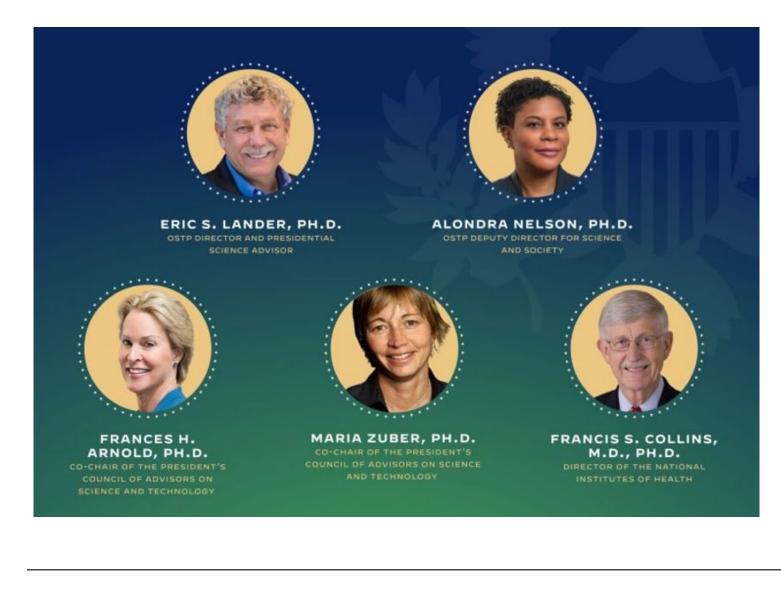

What political considerations will impact ARPA-H?

- Is there a vehicle this Congress for ARPA-H authorizing legislation?
- Is authorization legislation needed or wanted given direction from appropriators?
- Where does ARPA-H fit in with other health priorities like pandemic preparedness?
- How does the upcoming retirement of key Senators (Blunt, Burr, Leahy, Shelby) impact future prospects for ARPA-H?
- Will ARPA-H be subject to the same high levels of congressional scrutiny that NIH faces?
- Will President Biden's strong support for ARPA-H be helpful or harmful long-term?

SETTING UP ARPA-H

Initial Planning

NIH AND OSTP – KEY PLAYERS IN INITIAL PLANNING

Larry Tabak, D.D.S., Ph.D. Acting Director, NIH

Tara Schwetz, Ph.D. Acting Principal Deputy Director, NIH

NIH AND OSTP LISTENING SESSIONS

- NIH and OSTP hosted 15 public and invite-only listening sessions in summer 2021
- Nearly 250 organizations and over 5,000 participants took part
- Published report summarizing feedback received and FAQs:
 - Scientific directions: disease-agnostic platform technologies (e.g. Al/ML; sensors and wearables; digital health); focus on early detection, diagnostics, and treatment platforms; integrative approaches that emphasize data sharing
 - Process: significant program manager autonomy; streamlined review; milestone-based projects with nontraditional mechanisms (e.g. OTAs)
 - Key elements: emphasis on equity and diversity (research activities and personnel); complement, not compete with NIH; multi-sector partnerships; strong relationships with FDA and CMS

NIH AND OSTP VISION FOR ARPA-H

Mission:

"To make **pivotal investments in breakthrough technologies** and broadly applicable platforms, capabilities, and resources that have the potential to **transform important areas of medicine and health** and that cannot readily be accomplished through traditional research or commercial activity."

"To benefit the health of all Americans

by catalyzing health breakthroughs that cannot readily be accomplished through traditional research or commercial activity."

Goals:

- Revolutionize prevention, treatment, and cures in a range of diseases
- Convert use-driven ideas into tangible solutions for patients far more rapidly than previously believed possible
- Make high-risk investments in broadly applicable platforms, capabilities, resources
- Foster breakthroughs across various levels from the molecular to the societal – and drive them to the point of adoption to serve patients
- Overcome market failures through critical solutions or incentives

EXAMPLES OF POTENTIAL ARPA-H PROJECTS

Develop mRNA vaccines to prevent most cancers

Create molecular "zip codes" that target drugs only to specific tissues and cell types, to eliminate serious side effects

Holistic interventions to eliminate racial disparities in maternal morbidity/mortality rates and premature births

Highly accurate, inexpensive, non-intrusive, wearable monitors for blood pressure and blood sugar that provide real-time data to patients and providers
